Re: Additional Information to Control Number 624567

Please find my response to the questions posed in your email dated August 29, 2021.

Q1. For the cesium-137 source, your application does not list a specific model number for the device the source is being used in. We have the manufacturer and model no. of the source, and the manufacturer of the device, Berthold, but you have not specified a device model number. You have to provide that to us specifically.

A1. The specific model number for the device the source is being used in is LB 7440-F-CR. See attachment.

Q2. For the californium-252 sources, their half-life is relatively short, compared to other, more commonly used radionuclides for fixed gauges. So you will need to replace the sources about every 2.5 years or so, is that correct? If so, then your current possession limit is too low because it will not allow you to have more than 27 millicuries total.

A2. Thank you for the question, you make an excellent point. I am requesting the possession limit to be 54 millicuries to accommodate a full source exchange.

Additionally, please find the attached Organizational Chart for CenterPoint Energy. You can work your way through the chart to me. I made a couple marks to help get to me.

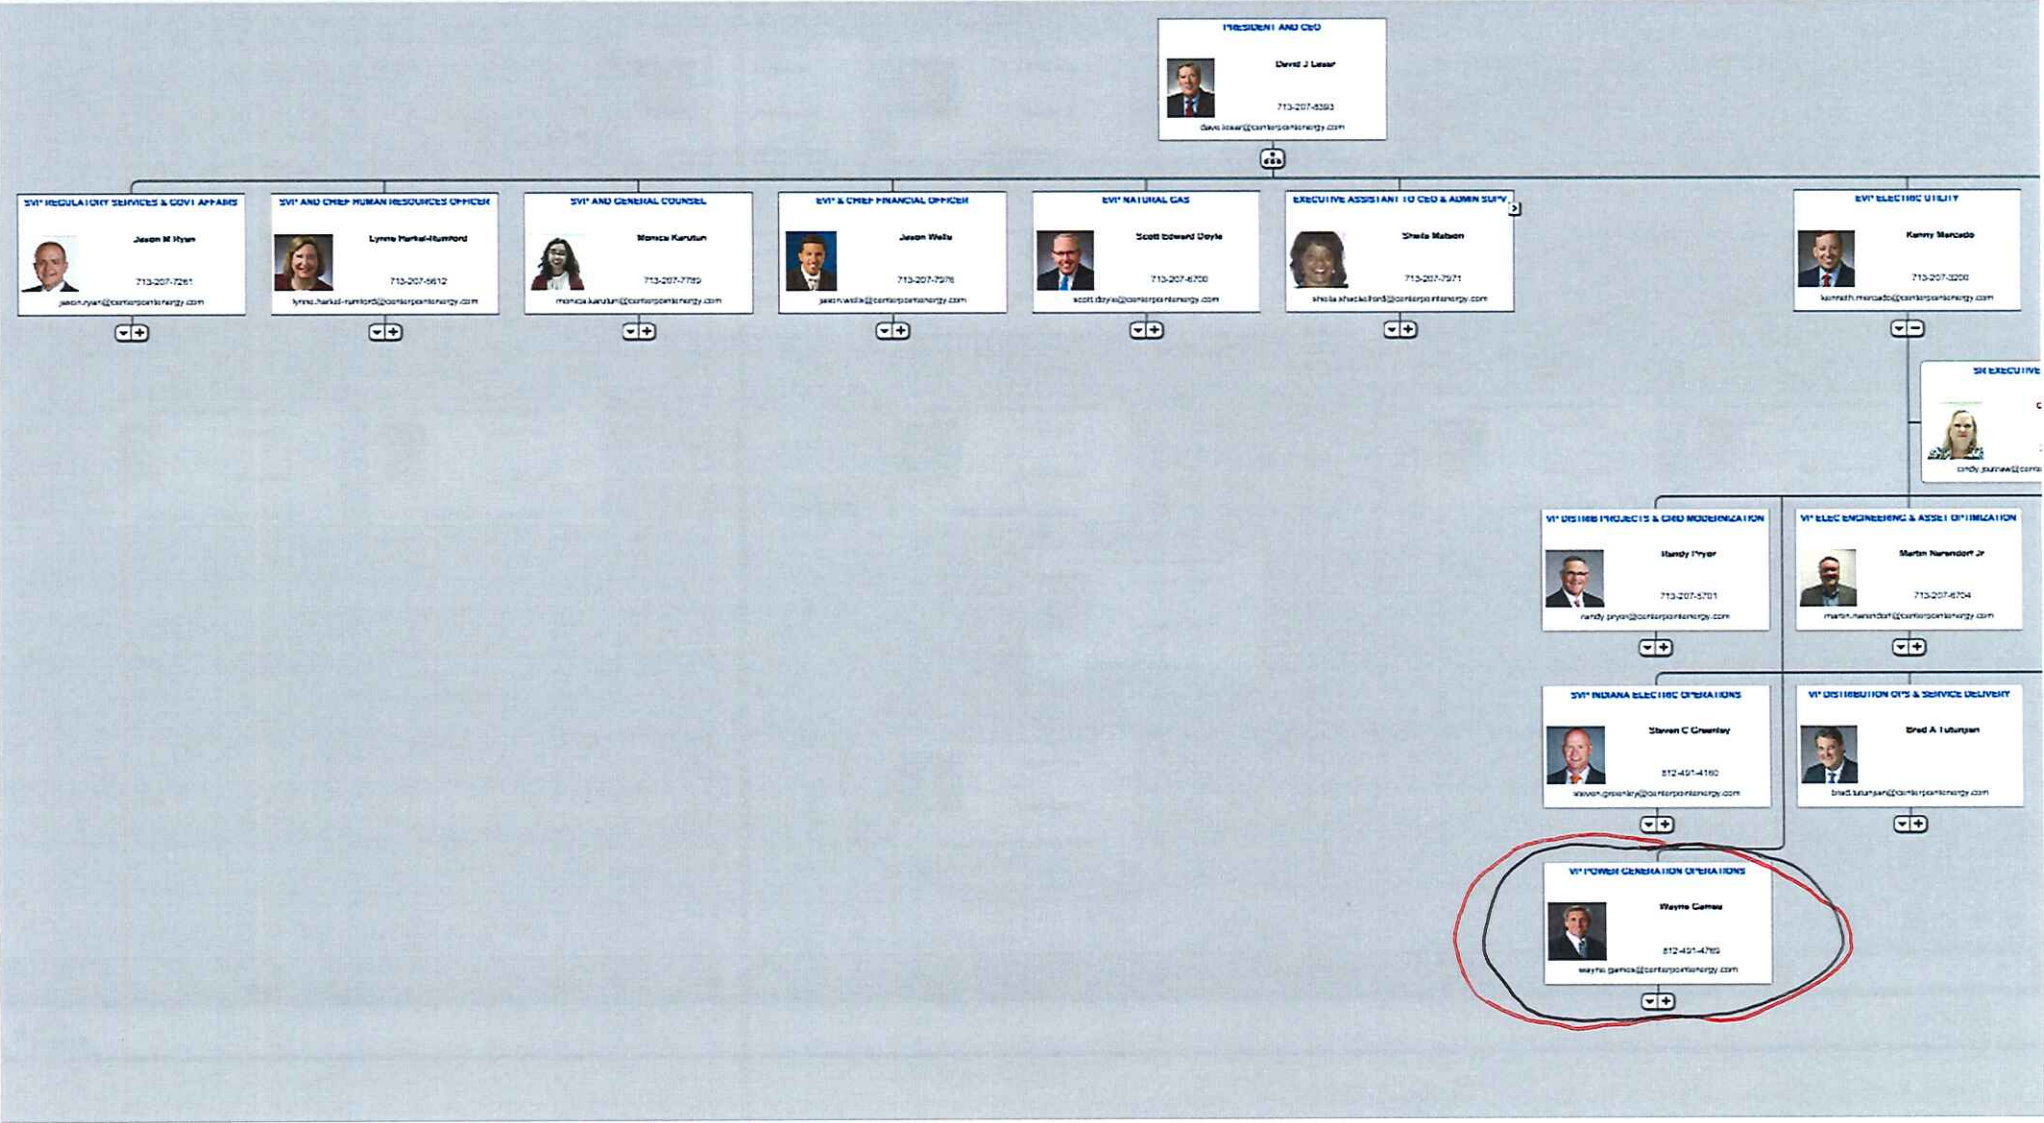

Please feel free to contact me if you have additional questions.

Sincerely,

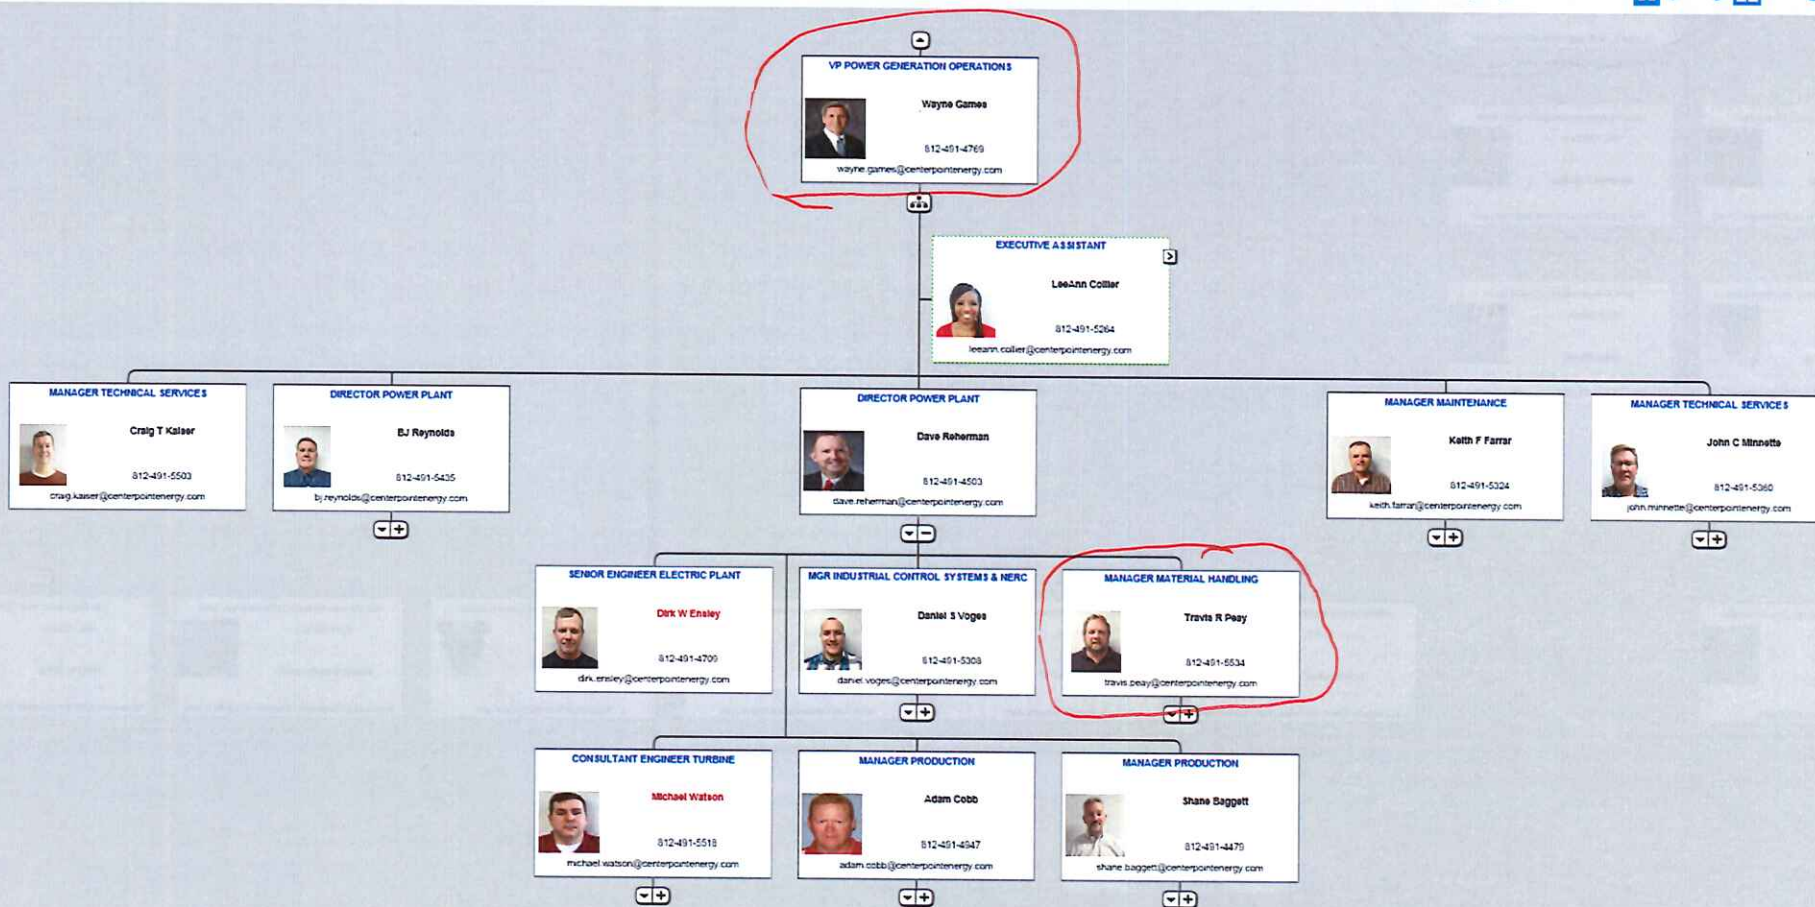

A handwritten signature in black ink that reads "Travis Peay". The signature is written in a cursive, flowing style.

Colleen,

Please see the attached document to address the issues we discussed in our Teams Meeting.

Have a great day!

Thanks
Travis
