Subject: [External_Sender] NCR must regulate Westinghouse Government Services

Please provide a full explanation of the management of waste streams from TBAR (Tritium Producing Burnable Absorber Rods) production at Westinghouse Government Services and how they are regulated.

Is it not required that this process be regulated by the NRC?

I live 30 minutes from the facility and I am deeply concerned about the waste and the lack of regulations at Westinghouse Government Services. NRC must regulate them and require an environmental impact statement.

Respectfully,

Cassandra Fralix
