# PCB Analysis

# Case Narrative

**GC Semivolatile PCB  
Technical Case Narrative  
Haley & Aldrich, Inc. (HAAL)  
SDG #: 409254**

**Product:** Analysis of Polychlorinated Biphenyls by ECD

**Analytical Method:** SW846 3541/8082A

**Analytical Procedure:** GL-OA-E-040 REV# 23

**Analytical Batch:** 1614293

**Preparation Method:** SW846 3541

**Preparation Procedure:** GL-OA-E-066 REV# 7

**Preparation Batch:** 1614292

The following samples were analyzed using the above methods and analytical procedure(s).

<b><u>GEL Sample ID#</u></b>	<b><u>Client Sample Identification</u></b>
409254026	DP050113
409254027	DP050213
409254028	SS050100
409254029	DP020312
409254031	DP020312DUP
409254032	DP020413
409254034	DP020207
409254036	DP020209
409254038	DP020114
1203665373	Method Blank (MB)
1203665374	Laboratory Control Sample (LCS)
1203665375	409254026(DP050113) Matrix Spike (MS)
1203665376	409254026(DP050113) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on a "dry weight" basis.

**Data Summary:**

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

**Quality Control (QC) Information**

**Surrogate Recoveries**

Samples (See Below) did not meet acceptance criteria for surrogate recovery due to dilution.

Sample	Analyte	Value
409254028 (SS050100)	4cmx	25* (30%-120%)

**Technical Information**

**Preparation/Analytical Method Verification**

All samples and QC in this batch were cleaned using alumina in order to remove oil and other high molecular weight interferences. All samples and QC in this batch were cleaned with activated copper in order to remove sulfur. All reported analyte detections in client and quality control samples were within the established retention time windows. Reported analyte concentrations were confirmed on dissimilar columns.

**Sample Dilutions**

Sample 409254028 (SS050100) was diluted due to the thickness of the extract.

**Miscellaneous Information****Manual integrations**

Samples 1203665373 (MB), 1203665374 (LCS), 1203665375 (DP050113MS), 1203665376 (DP050113MSD), 409254026 (DP050113), 409254027 (DP050213), 409254028 (SS050100), 409254029 (DP020312), 409254031 (DP020312DUP), 409254032 (DP020413), 409254034 (DP020207), 409254036 (DP020209) and 409254038 (DP020114) required manual integration to correctly position the baseline as set in the calibration standard injections.

**Certification Statement**

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

## GEL LABORATORIES LLC

2040 Savage Road Charleston SC 29407 - (843) 556-8171 - www.gel.com

### Qualifier Definition Report for

HAAL002 Haley & Aldrich, Inc.

Client SDG: 409254 GEL Work Order: 409254

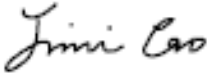

#### The Qualifiers in this report are defined as follows:

- \* A quality control analyte recovery is outside of specified acceptance criteria
- \*\* Analyte is a surrogate compound
- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- DL Indicates that sample is diluted.
- RA Indicates that sample is re-analyzed without re-extraction.
- RE Indicates that sample is re-extracted.

#### Review/Validation

GEL requires all analytical data to be verified by a qualified data reviewer. In addition, all CLP-like deliverables receive a third level review of the fractional data package.

The following data validator verified the information presented in this data report:

Signature: 

Name: Jimin Cao

Date: 15 NOV 2016

Title: Data Validator

#### Samples

409254001,002,003,004,005,006,007,008,009,010,011,012,013,014,015,016,017,018,019,020,022,024,029,032,034,036 and 038 in this SDG were analyzed for metals and mercury on a "dry weight corrected" basis. Samples 409254021,023,025,030,033,035,037 and 039 in this SDG were analyzed for metals and mercury on an "as received" basis.

#### Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

#### Calibration Information

##### **CRDL/PQL Requirements**

The PQL standard recoveries for SW846 6010C or 6010D met the control limits with the exception of antimony. Client sample concentrations were less than the MDL or greater than two times the PQL; therefore the data were not adversely affected. 409254011 (SS110100), 409254012 (SS110200), 409254013 (SD140300), 409254014 (SD140200), 409254015 (SD140100), 409254016 (SD140100DUP), 409254017 (DP100113), 409254018 (DP100212), 409254019 (DP100310) and 409254020 (DP010216)-ICP.

#### Quality Control (QC) Information

##### **Matrix Spike (MS/MSD) Recovery Statement**

The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analytes. The post spike recoveries were within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recoveries may be attributed to possible sample matrix interference and/or non-homogeneity.

Sample	Analyte	Value
1203657516 (DP010216MS)	Mercury	48.1* (75%-125%)
1203657598 (DP110100MS)	Barium	149* (75%-125%)
	Potassium	189* (75%-125%)
	Zinc	65.7* (75%-125%)
1203657603 (DP010109MS)	Antimony	73.2* (75%-125%)
	Potassium	133* (75%-125%)

##### **Duplicate Relative Percent Difference (RPD) Statement**

The RPD obtained from the designated sample duplicate (DUP) is evaluated based on acceptance criteria of 20% when the sample is >5X the contract required reporting limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control of +/-RL is used to evaluate the DUP results. Not all the applicable analyte RPD values were within the acceptance criteria.

Sample	Analyte	Value
--------	---------	-------

1203657597 (DP110100DUP)	Antimony	abs(4030 - 2730)* (+/-1040 ug/kg)
	Lead	153* (0%-20%)
	Manganese	20.4* (0%-20%)
1203657602 (DP010109DUP)	Aluminum	21.8* (0%-20%)
	Barium	23.4* (0%-20%)
	Copper	24.1* (0%-20%)
	Lead	20.8* (0%-20%)

#### Serial Dilution % Difference Statement

The serial dilution is used to assess matrix suppression or enhancement. Raw element concentrations 25x the IDL/MDL for CVAA, 50X the IDL/MDL for ICP and 100X the IDL/MDL for ICP-MS analyses are applicable for serial dilution assessment. Not all the applicable analytes were within the established acceptance criteria. Matrix suppression may be suspected. The data has been qualified.

Sample	Analyte	Value
1203657599 (DP110100SDILT)	Copper	17.4 *(0%-10%)

#### Technical Information

##### Preparation/Analytical Method Verification

Method SW-846 3050B is not a total digestion technique for most samples. It is a very strong acid digestion that will dissolve almost all elements that could become environmentally available. By design, elements bound in silicate structures are not normally dissolved by this procedure as they are not usually mobile in the environment.

##### Sample Dilutions

Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Sample was diluted in order to bring raw values within the linear range of the instrument for calcium, and for the analytes interfered with, in order to ensure that the inter-element correction factors were valid for silver, aluminum and potassium. 409254011 (SS110100)-ICP. Samples required dilutions in order to minimize suppression of beryllium, thallium and antimony due to matrix interferences. 409254011 (SS110100), 409254012 (SS110200), 409254013 (SD140300), 409254014 (SD140200), 409254015 (SD140100), 409254016 (SD140100DUP), 409254018 (DP100212), 409254019 (DP100310) and 409254020 (DP010216)-ICP.

Analyte	409254									
	011	012	013	014	015	016	017	018	019	020
Several	10X 1X	10X 1X	10X 1X	10X 1X	10X 1X	10X 1X	10X 1X	10X 1X	10X 1X	20X 10X 1X

##### Preparation Information

The samples and associated matrix QC were prepared at a ten times dilution factor or greater to minimize potential interferences arising from the SPLP leaching solution. ICP and CVAA.

##### Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the

requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

### Qualifier Definition Report for

HAAL002 Haley & Aldrich, Inc.

Client SDG: 409254 GEL Work Order: 409254

#### The Qualifiers in this report are defined as follows:

- \* A quality control analyte recovery is outside of specified acceptance criteria
- B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL
- E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria
- J Value is estimated
- N Metals--The Matrix spike sample recovery is not within specified control limits
- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

#### Review/Validation

GEL requires all analytical data to be verified by a qualified data reviewer. In addition, all CLP-like deliverables receive a third level review of the fractional data package.

The following data validator verified the information presented in this data report:

Signature:

Name: Jamie Johnson

Date: 18 NOV 2016

<b>Potentially affected work order(s)(SDG): 409254</b> <b>Application Issues:</b> Failed Recovery for MS/MSD, or PS/PSD			
<b>Specification and Requirements</b>		<b>DER Disposition:</b>	
<b>Exception Description:</b>  1. Failed Recovery for MS/MSD, or PS/PSD:  QC 1203657516MS		1. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analyte. The post spike recovery was within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recovery may be attributed to possible sample matrix interference and/or non-homogeneity. 1203657516 (DP010216MS) Mercury [48.1* (75%-125%)].

<b>Exception Description:</b>			
1. Failed RPD for DUP: QC 1203657597DUP  2. Failed Recovery for MS/MSD, or PS/PSD: QC 1203657598MS  3. Failed difference for SDILT: QC 1203657599SDILT		1. Not all the applicable analyte RPD values were within the acceptance criteria. 1203657597 (DP110100DUP) Antimony [abs(4030 - 2730)* (+/-1040 ug/kg)], Lead [153* (0%-20%)] and Manganese [20.4* (0%-20%)].  2. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analyte. The post spike recovery was within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recovery may be attributed to possible sample matrix interference and/or non-homogeneity. 1203657598 (DP110100MS) Barium [149* (75%-125%)], Potassium [189* (75%-125%)] and Zinc [65.7* (75%-125%)].  3. Not all the applicable analytes were within the established acceptance criteria. Matrix suppression may be suspected. The data has been qualified. 1203657599 (DP110100SDILT) Copper [17.4 *(0%-10%)].

# **General Chem Analysis**

# Case Narrative

**General Chemistry  
Technical Case Narrative  
Haley & Aldrich, Inc. (HAAL)  
SDG #: 409254**

**Product:** Perchlorate

**Analytical Method:** EPA 314.0

**Analytical Procedure:** GL-GC-E-096 REV# 8

**Analytical Batches:** 1611808 and 1611807

The following samples were analyzed using the above methods and analytical procedure(s).

<b><u>GEL Sample ID#</u></b>	<b><u>Client Sample Identification</u></b>
409254011	SS110100
409254012	SS110200
409254013	SD140300
409254014	SD140200
409254015	SD140100
409254016	SD140100DUP
1203659162	Method Blank (MB)
1203659163	Laboratory Control Sample (LCS)
1203659164	409254011(SS110100) Sample Duplicate (DUP)
1203659165	409254011(SS110100) Matrix Spike (MS)

The samples in this SDG were analyzed on a "dry weight" basis.

**Data Summary:**

There are no exceptions, anomalies or deviations from the specified methods. All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable.

**Certification Statement**

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

### **Qualifier Definition Report for**

HAAL002 Haley & Aldrich, Inc.

Client SDG: 409254 GEL Work Order: 409254

#### **The Qualifiers in this report are defined as follows:**

- \* A quality control analyte recovery is outside of specified acceptance criteria
- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

#### **Review/Validation**

GEL requires all analytical data to be verified by a qualified data reviewer. In addition, all CLP-like deliverables receive a third level review of the fractional data package.

The following data validator verified the information presented in this data report:

### Notes:

The Qualifiers in this report are defined as follows:

- < Result is less than value reported
- > Result is greater than value reported
- B The target analyte was detected in the associated blank.
- E General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
- H Analytical holding time was exceeded
- J Value is estimated
- N/A RPD or %Recovery limits do not apply.
- N1 See case narrative
- ND Analyte concentration is not detected above the detection limit
- NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
- R Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.
- R Sample results are rejected
- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- Z Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
- ^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
- d 5-day BOD--The 2:1 depletion requirement was not met for this sample
- e 5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes

## QC Summary

Workorder: 409254

Page 2 of 2

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time
h	Preparation or preservation holding time was exceeded										

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.

^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

\* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

SFP	Spent Fuel Pool
TRU	Transuranic Radionuclide

### EXECUTIVE SUMMARY

A limited Historical Site Assessment (HSA) [1] was conducted at the Omaha Public Power District (OPPD) Fort Calhoun Station (FCS) between August and October 2016. The HSA effort focused on environmental (open land) areas at the FCS site; assessment of potential radiological impact to FCS site buildings, structures, or systems was not included.

The review of available historical records and interviews with FCS personnel identified several areas where additional data were required in order to assess the current radiological status of environmental areas and/or identify areas that would potentially require special consideration during decommissioning planning.

As a follow-up to the HSA, a Limited Radiological Characterization Plan (LRCP) [3] was developed with the objective of closing the gaps in historical radiological data identified by the HSA. The LRCP incorporated guidance found in NUREG-1575 [2], and established requirements for survey designs and techniques, radiation detection instruments, sample analyses and for ensuring the quality of collected data.

The LRCP was implemented at the FCS site between October 19 through 28, 2016. The limited site characterization surveys included the collection of 52 soil samples (36 surface soil samples and 16 sub-surface soil samples) from potentially radiologically impacted environmental areas. All soil samples were transferred to a contracted laboratory for gamma spectroscopy analyses. Four soil samples collected from the Protected Area (PA) were also submitted for analyses to identify hard-to-detect (HTD) beta-emitting radionuclides. Additionally, several gamma scans were performed within each target environmental area.

The gamma scans did not identify any elevated radiation levels within the targeted environmental areas. Laboratory results identified low concentrations of Cs-137 (i.e., approximately 0.1 pCi/g to 0.4 pCi/g) in 5 of the 36 surface soil samples. However, the Cs-137 concentrations were small percentages (i.e., <4%) of the NRC screening value for Cs-137 (11 pCi/g) published in NUREG 1757 [4], and are well below concentrations that would require remediation or special consideration during decommissioning. Results for all other plant-related radionuclides were below the *a posteriori* minimum detectable concentration (MDC) values.

The following conclusions were reached based on the radiological data collected under the LRCP:

- The radiological data collected during the implementation of the LRCP support closure of data gaps associated with environmental areas at the FCS site, as identified in the HSA.
- The DQOs established in the LRCP to ensure the quality of the collected data were met during implementation of the plan.
- The identified concentrations of Cs-137 in 5 soil samples from the targeted environmental areas at the FCS site are small fractions of the NRC screening level for Cs-137 in soil, which provides evidence that remediation or special consideration will not likely be required for the environmental areas during decommissioning planning. This conclusion is also supported by the reported results for all other plant-related radionuclides (i.e., all were below the *a posteriori* MDC values).
- The collected radiological data are insufficient for use as release basis for the potentially impacted environmental (open land) areas.

**SECTION 1 INTRODUCTION**

A limited Historical Site Assessment (HSA) was conducted at the Omaha Public Power District (OPPD) Fort Calhoun Station (FCS) between August and October 2016. The HSA effort was designed and conducted in accordance with guidance found in NUREG-1575, *Multi-Agency Radiation Survey and Site Investigation Manual (MARSSIM)*. The HSA effort was limited in the sense that it focused on identifying environmental (open land) areas across the FCS site that have been or potentially have been impacted by the historic use of radioactive materials; assessment of potential radiological impact to FCS site buildings, structures, or systems was not included.

Based on reviews of available historical records and information, coupled with anecdotal information obtained during interviews with FCS site personnel, the HSA effort identified nine environmental (open land) areas as potentially impacted due to the historic use and generation of radioactive materials at the FCS site. In addition, the HSA identified gaps found in the available historical information where additional data are required in order to determine the current radiological status of the potentially impacted areas.

A limited radiological characterization plan (LRCP) was developed to guide the collection of additional radiological information that would close the data gaps identified for the nine impacted environmental areas. Development of the LRCP incorporated guidance found in NUREG-1575, including the MARSSIM data quality objective (DQO) process, which was used to establish requirements for survey designs and techniques, radiation detection instruments, sample analyses, and to ensure the quality of collected data.

The radiation surveys and soil sample analyses conducted under the LRCP targeted the potential plant-related radionuclides-of-concern (ROCs) identified for the potentially impacted open land areas. Potential ROCs included plant-related gamma emitting radionuclides (e.g., Co-60, Cs-137) as well as hard-to-detect (HTD) beta emitting radionuclides (e.g., H-3, Sr-90).

The LRCP was implemented at the FCS site in October 2016. This report summarizes the radiological findings collected during the implementation of the plan.

**SECTION 2      OBJECTIVE**

The primary objective of the LRCP was the closure of data gaps identified for each potential radiologically impacted environmental area in the HSA. Closure of data gaps will provide information to support a determination of the current radiological status of each impacted environmental area and may serve to identify radiological issues that would warrant special consideration during decommissioning planning. Accordingly, the radiological surveys for the environmental areas are considered limited characterization surveys (that is, equivalent to scoping surveys described in NUREG-1575), designed only to fill identified data gaps, but may provide useful information for future site characterization planning, additional decommissioning planning, and final status survey (FSS) planning.

**SECTION 3 BACKGROUND****3.1 SITE HISTORY**

FCS Unit 1 was a Combustion Engineering 2-loop Pressurized Water Reactor (PWR) designed to permit generation of a net electrical output of approximately 475 MW. Plant construction began in 1966. The first fuel assembly was loaded into the reactor in May – June 1973. The U.S. NRC issued an operating license on August 9, 1973. The plant officially went online on September 1, 1973 with commercial operation starting 25 days later.

FCS experienced several radiological events over the operating years that may have had a radiological impact on environmental areas at the FCS site. These historical events are described and discussed in the FCS HSA. During the late 1980s and early 1990s, new buildings, including the Radwaste Processing Building, Chemistry & Radiation Protection Facility, Cafeteria, were constructed within the protected area (PA) whereas the Training Building and Administration Building were constructed outside the PA.

In early 2011, FCS received warning of the pending flood from the U.S. Army Corp of Engineers, who had to control water from a record snowmelt via systematic releases through a network of upstream dams on the Missouri River. FCS prepared for the flood by constructing aqua berms and raised walkways to protect the plant components and provide plant access to staff. On June 6, 2011, when the reactor was shut down for scheduled refueling, FCS declared an Unusual Event due to Missouri River flooding. The FCS site remained flooded for approximately 3 months.

In June 2016, OPPD Board of Directors voted to cease operations at FCS and to pursue the SAFSTOR decommissioning method. The FCS site has ceased operations and is currently in the early stages of transition and decommissioning planning. Efforts and activities at the site are focused on preparations required for moving to a SAFSTOR status, limited characterization of the environmental areas, disposition of legacy wastes, and transfer of spent fuel to the ISFSI

**3.2 ENVIRONMENTAL IMPACTED AREAS**

The recent limited HSA identified 9 environmental (open land) areas within the boundaries of the FCS site that have been potentially impacted by historical use and generation of radioactive materials at FCS. The HSA report provides a discussion of the rationale and bases for classifying the 9 environmental areas as potentially impacted.

Table 3.2 identifies the radiologically impacted environmental areas and summarizes the type of missing data for area. Figure 3.2 shows the locations of the potentially impacted areas at the FCS site.

**3.3 RADIONUCLIDES-OF-CONCERN**

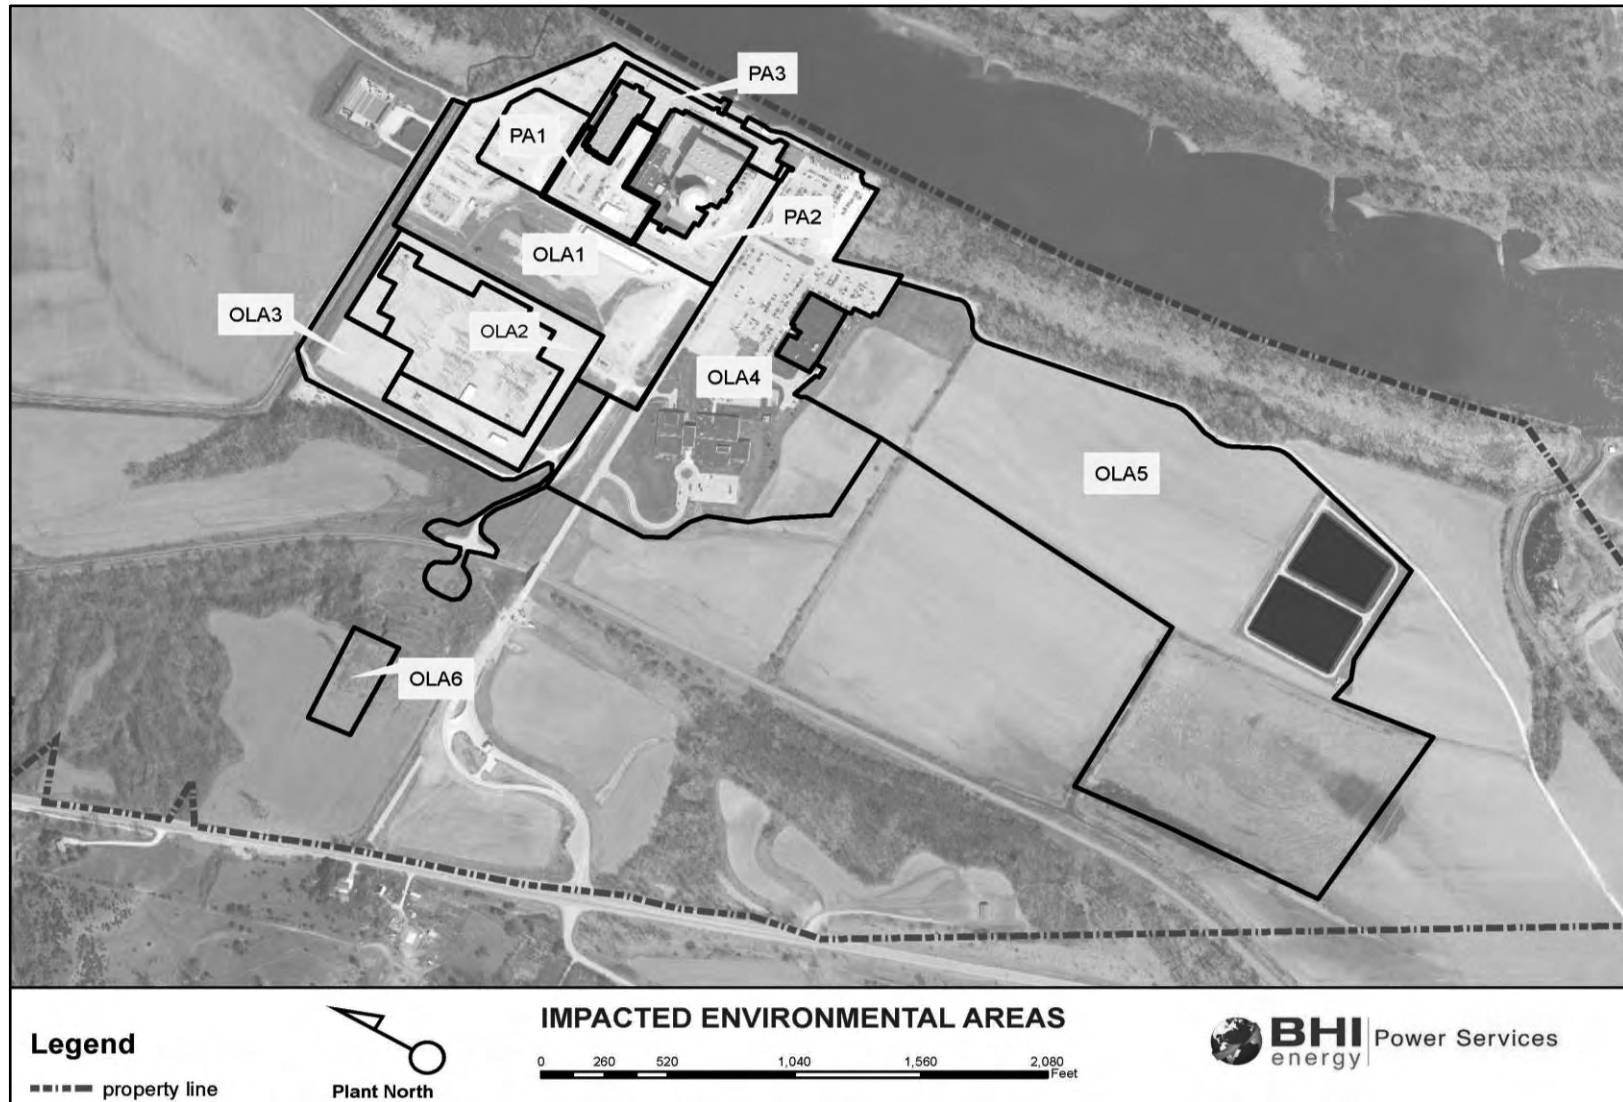

The HSA identified known or potential ROCs that may be present in each impacted area based on available historical information and work practices. Potential ROCs included plant-related gamma-emitting radionuclides and HTD beta-emitting radionuclides. Table 3.3 provides a summary of known or potential ROCs for each impacted area as identified in the HSA.

**Table 3.2 Summary of Potentially Impacted Environmental Areas at the FCS Site**

Environmental Area	Area Code	Data Gap
Northwest section of the Protected Area (PA)	PA1	Radiation surveys Soil analyses
Southwest section of the PA	PA2	Radiation surveys Soil analyses
East section of the PA	PA3	Radiation surveys Soil analyses
Open land area (OLA) located west and north of PA	OLA1	Radiation surveys Soil analyses
Open area lying between the Switchyard fence and the berm footprint that was underwater during the 2011 flood	OLA2	Radiation surveys Soil analyses
Northwest corner of the Switchyard area and the open land area west and south of the Switchyard	OLA3	Radiation surveys Soil analyses
Open land area south of PA surrounding the Training Building and Administration Building	OLA4	Radiation surveys Soil analyses
Open land area on south site property, including the landfill, sanitary lagoons, and sanitary lagoon water application area	OLA5	Radiation surveys Soil analyses
Open land area on hill area on west side of site property	OLA 6	Radiation surveys Soil analyses

**Table 3.3 Summary of Potential ROCs in Each Impacted Environmental Area**

Area Code	Potential ROC	Area Code	Potential ROC	Area Code	Potential ROC
PA1	Co-60, Cs-134, Cs-137, and HTD beta-emitters	OLA1	Co-60, Cs-134, Cs-137, and HTD beta-emitters	OLA4	Cs-137
PA2	Co-60, Cs-134, Cs-137, and HTD beta-emitters	OLA2	Cs-137	OLA5	Cs-137
PA3	Co-60, Cs-134, Cs-137, and HTD beta emitters	OLA3	Cs-137	OLA6	Cs-137

**Figure 3.2** Potential Radiologically Impacted Environmental Areas at the FCS Site

**SECTION 4 DATA QUALITY OBJECTIVES**

The Data Quality Objective (DQO) process presented in NUREG-1575 is a 7-step systemized approach for designing surveys to collect data needed for making decisions. When applied to survey designs, the MARSSIM DQO process increases confidence in collected data and ensures that the survey results are of sufficient quality and quantity to support the decision-making process. Some portions of the MARSSIM DQO process, such as determinations of minimum number of samples and limits on decision errors to ensure adequate statistical power of the collected data, were not incorporated in development of the LRCP because the limited nature of the surveys/sampling activities. Data collected under the LRCP are neither sufficient nor intended for use as the bases for release decisions for the potentially impacted areas; however, the data serve to support decommissioning planning and/or future characterization or FSS planning.

The following requirements were established for the project:

*Quality Assurance/Quality Control (QA/QC):*

- Valid calibrations for all field radiation detection instruments
- Documented daily pre- and post-use operability QC checks for all field radiation detection instruments
- Collection of one QA split soil sample

*Survey/sampling performance:*

- Field activities performed in accordance with approved procedures referenced in the survey plan
- Constraints on data collection, personal protective equipment (PPE) requirements, and safety issues identified prior to field activities
- Investigations of all radiation levels observed with audible distinctions greater than background during gamma scans
- Maintenance of sample custody and control during transfers via use of a CoC form

*Laboratory Analyses:*

- Laboratory must have accredited QA program
- Sensitivities of laboratory analytical methods must be capable of detecting radioactivity at environmental levels

## SECTION 5 RADIOLOGICAL SURVEY DESIGNS

The LRCP discusses the bases for the design of radiation surveys and sampling for the FCS environmental (open land) areas. The major aspects of those designs are summarized in the following sections.

### 5.1 MEASUREMENT TECHNIQUES

The measurement techniques included volumetric sampling and gamma scans performed in accordance with the procedures referenced in the LRCP. Collection of sub-surface soil samples was accomplished by manual digging, use of hand coring equipment, or with the support of soft dig and geo-probe processes.

### 5.2 MEASUREMENT LOCATIONS

All measurement locations are considered biased (or judgmental) measurement locations. Measurement locations were selected based on information in the HSA and professional judgement. The selection process for soil sampling considered (i) potential locations of residual radioactive material as identified in the HSA, (ii) potential collection points for surface run-off, (iii) likely collection locations for radioactive deposition, and (iv) professional judgement.

### 5.3 DETECTION LIMITS

Gamma scans over soil areas utilized a scan speed approximately equal to 0.5 m/s and an audible distinction above background as an action level to initiate an investigation and/or sampling activity. The use of an audible distinction above background was sufficient to identify environmental areas that would require special consideration during decommissioning activities and planning (i.e., areas where residual plant-related gamma-emitting radioactivity in soil exceeds the NRC screening values).

The detection limits for laboratory analyses of all soil samples were established at environmental radioactivity levels. Similar to an audible distinction above background during scans, the laboratory's standard analytical sensitivities for environmental radiation levels provided sufficient confidence for identifying plant-related radionuclide concentrations in soil that would require special consideration during decommissioning planning.

### 5.4 FIELD INSTRUMENTATION

Field instrumentation consisted of gamma scintillator detectors paired with data loggers. Table 5.4 provides a summary of the survey instrumentation used for gamma scans.

**Table 5.4 Survey Instrumentation Summary**

Instrumentation Pairing	Serial No.	Calibration Due Date	Use
Ludlum Model 2350-1 Data Logger and Ludlum Model 44-10 NaI Scintillator	221036 PR245275	10/10/2017	Gamma scans in all impacted areas
Ludlum Model 2350-1 Data Logger and Ludlum Model 44-10 NaI Scintillator	203485 PR226924	10/10/2017	Gamma scans in all impacted areas

**5.5 QUALITY ASSURANCE AND QUALITY CONTROL**

Section 2.0 in the LRCP established quality assurance (QA) and quality control (QC) requirements for field instruments and sampling. All field instruments were calibrated before the implementation of the plan and were within a valid calibration period when used to collect survey data. The instrumentation vendor used NIST-traceable sources in the calibrations of survey instruments. The operability of field instruments was verified before and after use. Written procedures governed the field survey and sampling activities. In addition, the integrity of soil samples was ensured by a CoC form, which was used when soil samples were transferred to the contracted laboratory.

Instrument calibration records and documentation for instrument QC checks are provided in Appendix C. Copies of the CoC forms are provided in Appendix D.

## SECTION 6 RADIOLOGICAL FINDINGS

The HSA identified nine potentially impacted environmental (open land) areas based on either known or potential presence of residual radioactive materials. The LRCP required sampling and gamma scans in each potentially impacted area. All field activities associated with the implementation of the LRCP were conducted at the FCS site between October 19 through October 28, 2016. Table 6.0 summarizes the sampling for each environmental area.

Table 6.0 Radiological Sampling Summary

Area Code	Approximate Area (m <sup>2</sup> )	Number Samples (Sample Depth)
PA1	12,200	2 surface soil (0-6 inches) 1 surface soil composite (0-6 inches) 3 sub-surface soil (1 ft, 3 ft, 5 ft)
PA2	11,300	2 surface soil (0-6 inches) 5 surface soil composites (0-6 inches) 2 sub-surface soil (6 ft)
PA3	7,700	1 surface soil (0-6 inches) 2 surface soil composites (0-6 inches) 1 sub-surface soil (6 ft)
OLA1	67,600	1 surface soil (0-6 inches) 5 surface soil composites (0-6 inches) 1 sub-surface soil (6 ft)
OLA2	29,300	3 surface soil (0-6 inches)
OLA3	38,500	6 surface soil (0-6 inches) 4 surface soil composites (0-6 inches)
OLA4	109,000	2 surface soil (0-6 inches) 1 sub-surface soil (3 ft)
OLA5	263,000	3 surface soil (0-6 inches) 1 sub-surface soil (3 ft)
OLA6	8,100	3 surface soil (0-6 inches) 3 sub-surface soil (1.5 ft)
Total soil samples		36 surface soil 16 sub-surface soil

The following sections provide detailed discussions of the survey and sampling activities conducted in environmental area, and present the survey results and conclusions for each environmental area.

Note that the use of “north” as a direction throughout this report refers to “plant” north rather than “true” north. The map illustrations throughout this report are oriented with true north at the top of the page. Area descriptions throughout this report rely on plant north to orient the reader to described relative positions and area boundaries. A plant north vector arrow is provided in the legend of each map illustration.

## 6.1 AREA PA1

Environmental area PA1 consists of the northwest area inside the PA fence and encompasses approximately 12,200 m<sup>2</sup>. Most of this area is covered with gravel and crushed stone; however, there are also small areas covered by concrete. During plant operating years, sealand containers holding radioactive materials were staged in the open area west of the Chemistry & Radiation Protection facility. The HSA did not reveal records documenting either loss of container integrity or leakage from the staged containers. The HSA also did not reveal records for radiation surveys and/or radiological sampling within the container staging area. If residual radioactive soil contamination is present, the potential ROCs would include those associated with radioactive waste streams, such as dry active waste (DAW).

The limited characterization survey for area PA1 included several area gamma scans. The gamma scan paths are shown on the annotated field maps for PA1 provided in Appendix A. The gamma scans conducted in area PA1 did not identify any radiation levels that exceeded ambient background levels.

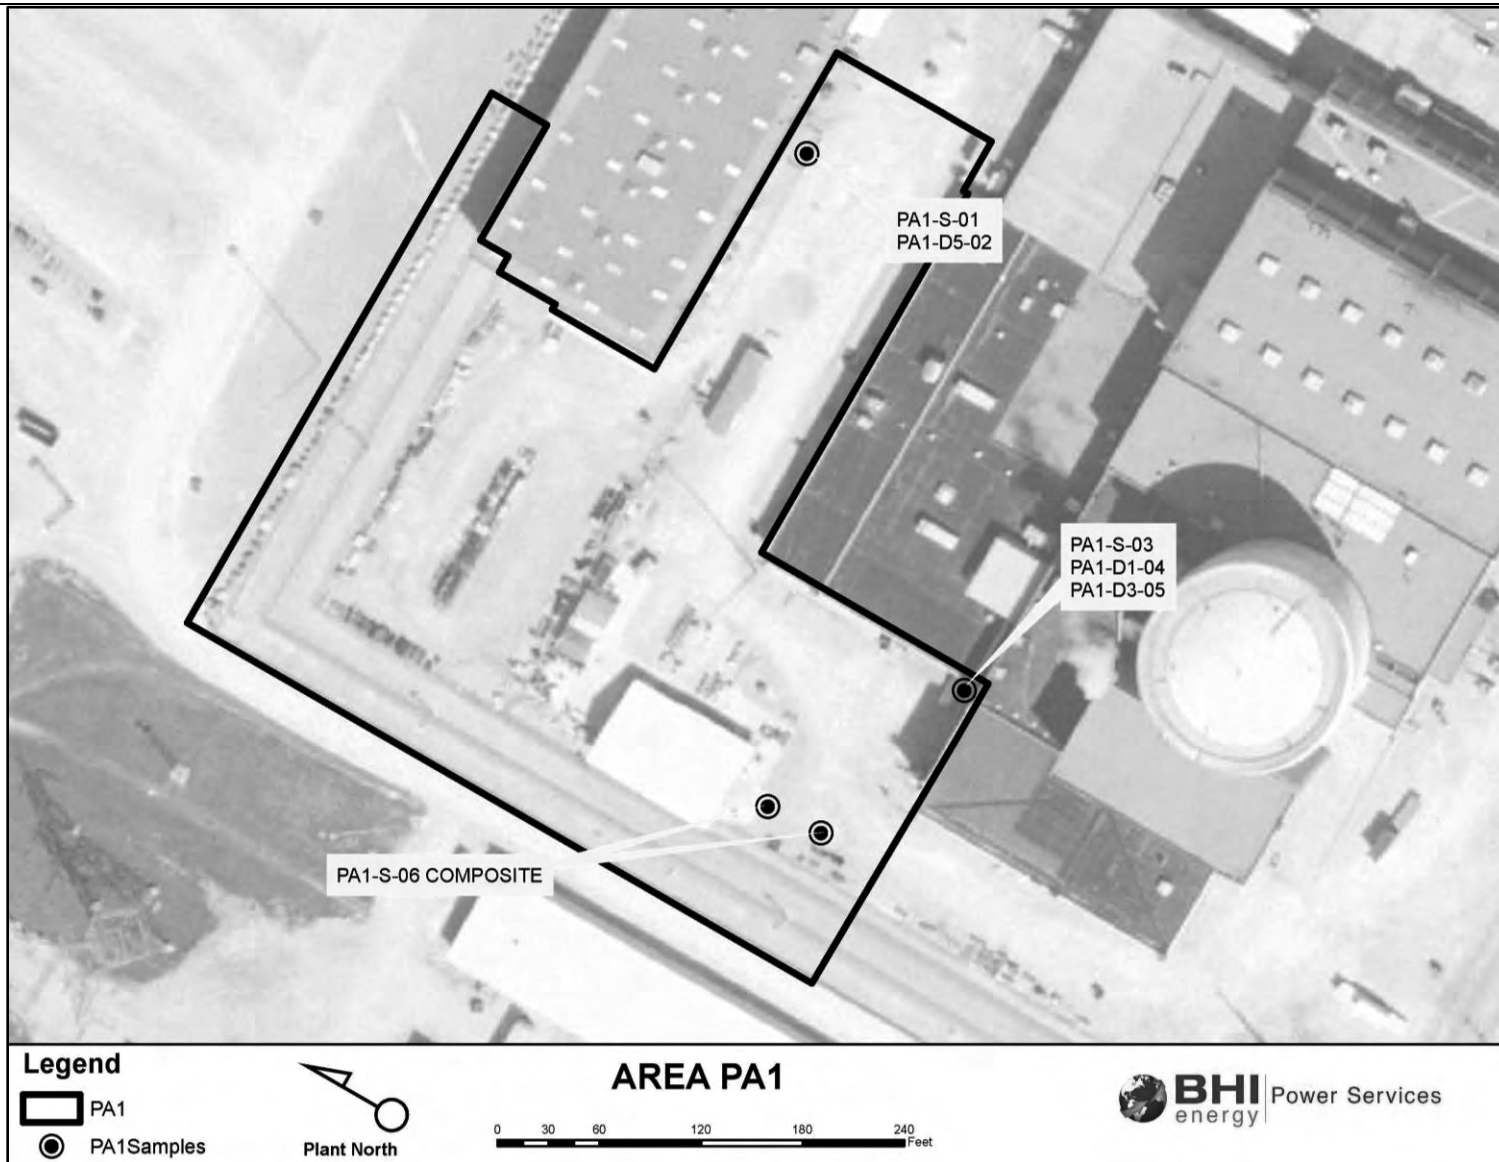

The limited characterization survey also included the collection of soil samples at historical staging locations for sealand containers, at a location where the north wall of the Radioactive Waste Processing Building meets the Auxiliary Building, and along the drain path of water from the New Warehouse. Figure 6.1 shows the sampling locations inside area PA1.

Six soil samples were collected in area PA1: 2 surface soil samples, 1 composite surface soil, and 3 sub-surface soil samples. Prior to transfer a contracted laboratory, FCS Radiation Protection (RP) personnel screened the PA1 soil samples for plant-related gamma-emitting radionuclides; none was identified. Sample integrity during transfer to the contracted laboratory was ensured through use a CoC form. Copies of the CoC forms are provided in Appendix D.

The contracted laboratory performed gamma analysis on each sample. In addition, the sample collected at location PA1-D1-04 was submitted for radio-chemical analyses to assess the potential present of HTD beta-emitting radionuclides and transuranic radionuclides (TRUs).

Laboratory analyses of soil samples from PA1 did not identify concentrations of plant-related ROCs that would require remediation or special consideration during decommissioning. All reported gamma analysis results were below the *a posteriori* minimum detectable concentration (MDC) values achieved in the analyses. The gamma scans conducted in area PA1, which did not identify any area of elevated radioactivity, support the laboratory data. In addition, the reported concentrations for HTD beta-emitting ROCs in the soil from area PA1 were below the *a posteriori* MDC values. Table 6.1-1 provides a summary of the results of gamma analyses for soil samples, and Table 6.1-2 summarizes the results for HTD radionuclides.

**Conclusion:** Results of the limited characterization efforts conducted in area PA1 did not identify any residual radiological conditions that would warrant special consideration during decommissioning planning. Although insufficient for use as the basis for releasing the area, the limited radiological data collected for area PA1 under this project will support the development of a subsequent MARSSIM characterization survey and final status survey.

**Figure 6.1** Soil Sampling Locations within Environmental Area PA1

Table 6.1-1 Summary of Gamma Analysis Results for Soil Samples Collected in Area PA1

Location Code	Cs-137 <sup>a</sup>	
	Reported Value pCi/g	MDC <sup>b</sup> pCi/g
PA1-S-01	1.1 E-02	7.0 E-02
PA1-D5-02	5.4 E-02	9.6 E-02
PA1-S-03	0.0 E+00	8.3 E-02
PA1-D1-04	5.6 E-04	8.8 E-02
PA1-D3-05	-2.1 E-02	6.1 E-02
PA1-6-06	2.6 E-02	5.5 E-02

<sup>a</sup> Reported values from gamma analysis and the MDC values are rounded to two significant digits.

<sup>b</sup> Analysis *a posteriori* MDC value.

Note: Results for Cs-137 are shown as the expected primary ROC. However, it is important to note that no other plant-related gamma emitting radionuclides were identified by gamma spectroscopy analysis.

Sr-90	1.5 E-01	9.1 E-01
Ni-63	-5.2 E+02	7.1 E+02

<sup>a</sup> Reported values and the MDC values are rounded to two significant digits.

<sup>b</sup> Analysis *a posteriori* MDC value.

## 6.2 AREA PA2

Environmental area PA2 consists of the southwest area inside the PA fence and encompasses approximately 11,300 m<sup>2</sup>. This area is covered with gravel and crushed stone; however, there are also small areas covered by concrete. During plant operating years, sealand containers were staged along the south fence line, opposite to the south side of the Radwaste Processing Building. In addition, the southwest corner of area PA2 was the site of a decontamination facility erected to support the 2006 steam generator (SG) replacement project. A detailed discussion of historical use of radioactive materials within area PA2 is provided in the HSA. Given that history, if residual radioactive soil contamination is present, the potential ROCs would include those associated with radioactive waste streams, such as DAW.

The limited characterization survey for area PA2 included several area gamma scans. The gamma scan paths are shown on the annotated field map for PA2 provided in Appendix A. The gamma scans conducted in area PA2 did not identify any radiation levels that exceeded ambient background levels in area PA2.

The limited characterization survey also included the collection of soil samples at the following locations:

- historical sealand container staging areas,
- the area surrounding the remaining concrete base for the SG decontamination facility,
- the bottom of the ramp adjacent to the Auxiliary Building and Containment,
- in front of the south rollup door to the Radwaste Processing Building, and
- in the east area of PA2.

Figure 6.2 shows the sampling locations inside area PA2.

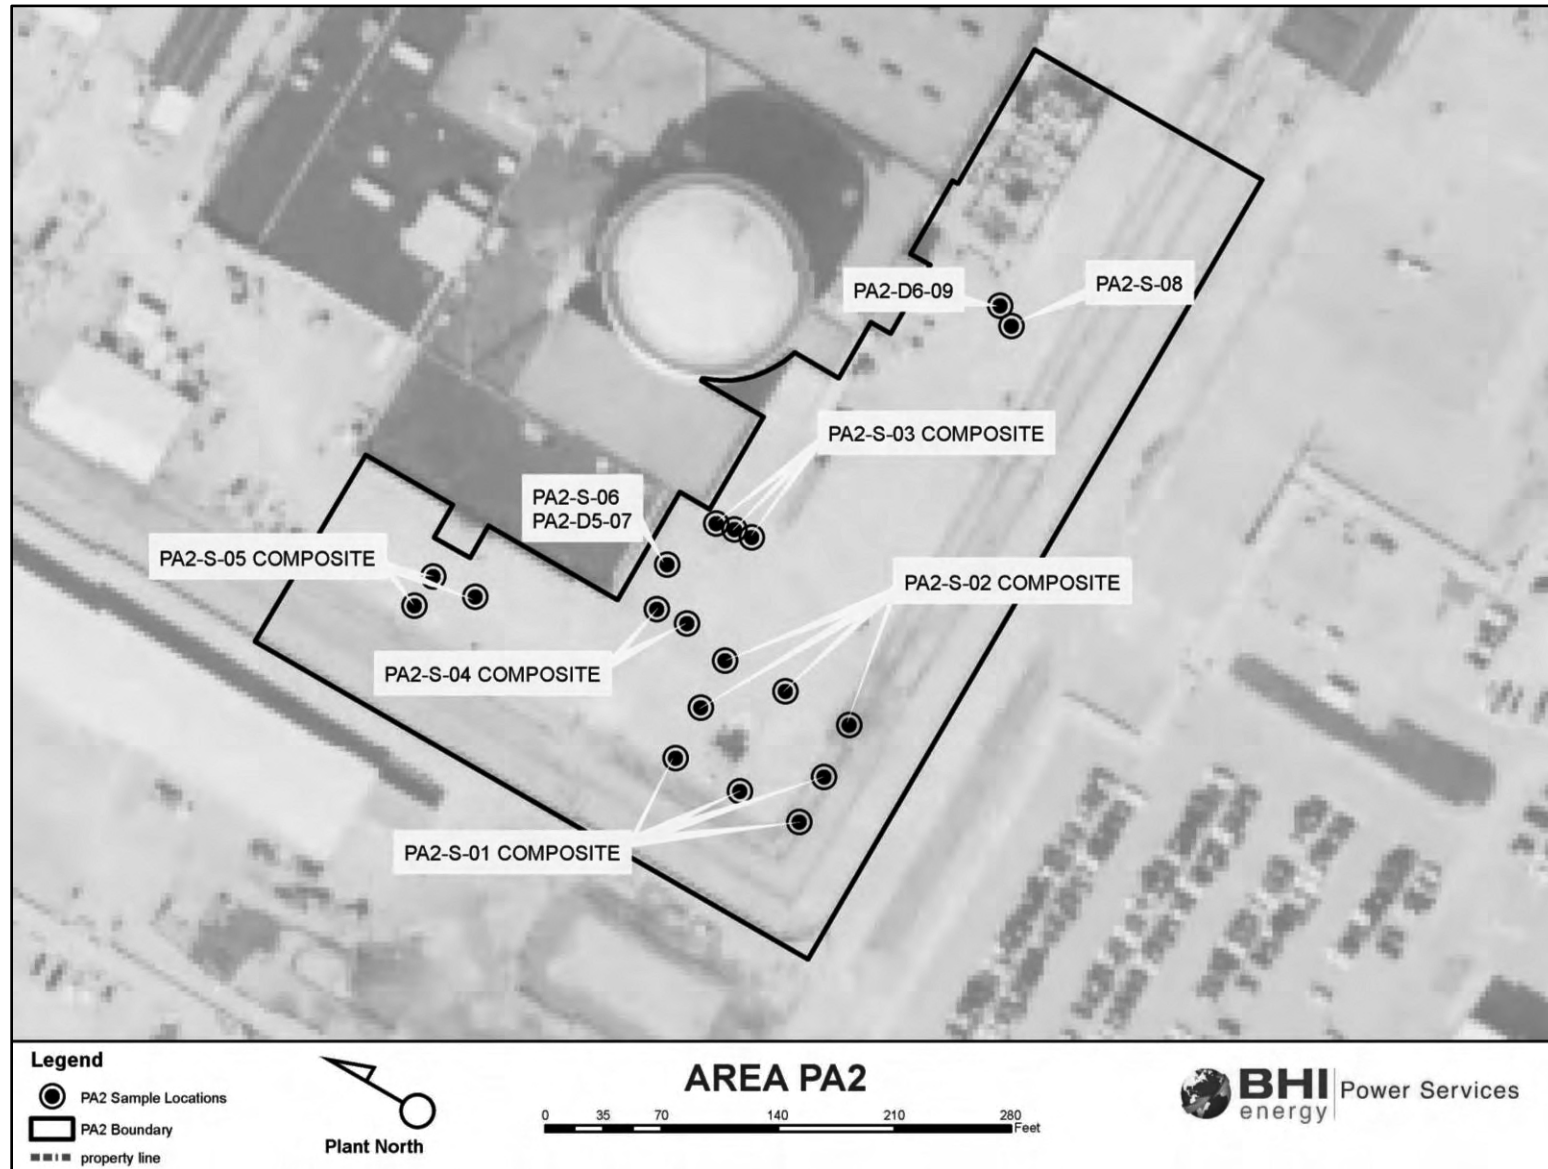

Nine soil samples were collected in area PA2: 2 surface soil samples, 5 composite surface soil samples, and 2 sub-surface soil samples. Prior to transfer a contracted laboratory, FCS RP personnel screened each PA2 soil sample for plant-related gamma-emitting radionuclides; none was identified. Sample integrity during transfer to the contracted laboratory was ensured through use a CoC form. Copies of the CoC forms are provided in Appendix D.

The contracted laboratory performed gamma analysis on each sample. In addition, the sample collected at locations PA2-S-06 and PA2-D5-07 were submitted for analyses to assess the potential present of HTD beta-emitting radionuclides and TRUs.

Laboratory analyses of soil samples from PA2 did not identify concentrations of plant-related ROCs that would require remediation or special consideration during decommissioning. One soil sample showed positive results for plant-related radioactivity. The gamma analysis for sample PA2-S-03 identified Cs-137 at a concentration approximately equal to 0.2 pCi/g, which represents a small percentage (i.e., <2%) of the NRC screening value for Cs-137 (11 pCi/g) published in NUREG 1757, *Consolidated Decommissioning Guidance*, and is well below any concentration that would require remediation or special consideration during decommissioning. The reported results for all other plat-related gamma-emitting ROCs were below the *a posteriori* MDC values achieved in the analyses. The gamma scans conducted in area PA2, which did not identify any area of elevated radioactivity, support the laboratory data. In addition, the reported concentrations of HTD beta-emitting ROCs in the soil from area PA2 were below the *a posteriori* MDC values achieved during analyses. Table 6.2-1 provides a summary of the results of gamma analyses for soil samples, and Table 6.2-2 provides the results for HTD radionuclides.

**Conclusion:** Results of the limited characterization efforts conducted in area PA2 did not identify any radiological issue that would warrant special consideration during decommissioning planning. Although insufficient for use as the release basis for the area, the limited radiological data collected for area PA2 under this project will support the development of a subsequent MARSSIM characterization survey and final status survey.

**Figure 6.2 Soil Sampling Locations within Environmental Area PA2**

Table 6.2-1 Summary of Gamma Analysis Results for Soil Samples Collected in Area PA2

Location Code	Cs-137 <sup>a</sup>	
	Reported Value pCi/g	MDC <sup>b</sup> pCi/g
PA2-S-01	5.4 E-02	6.2 E-02

<sup>a</sup> Reported values and the MDC values are rounded to two significant digits.

<sup>b</sup> Analysis *a posteriori* MDC value.

### 6.3 AREA PA3

Environmental area PA3 consists of the east area inside the PA fence and encompasses approximately 7,740 m<sup>2</sup>. A large portion of this area is covered with concrete; however, there are small areas of gravel adjacent to the Service Building open as a direct path to the soil. Unlike areas PA1 and PA2, area PA3 was not used for staging containers holding radioactive materials, and no significant radiological event was recorded in area PA3. However, there are underground pipes associated with the Discharge Structure and liquid effluent release path. If residual radioactive soil contamination is present, the potential ROCs would include those associated with liquid effluent.

The limited characterization survey for area PA3 included several area gamma scans. The gamma scan paths are shown on the annotated field maps for PA3 provided in Appendix A. The gamma scans conducted in PA3 did not identify any radiation levels that exceeded ambient background levels in area PA3.

The limited characterization survey also included the collection of soil samples at the following locations:

- seams/breaks present in the concrete in the north end of PA3,
- direct paths to soil through the gravel-covered areas adjacent to walkway in front of the Maintenance Building and Service Building, and
- in the vicinity of the excavation and inspection of the Discharge Line near the Intake Structure.

Figure 6.3 shows the sampling locations inside area PA3.

Four soil samples were collected in area PA3: 1 surface soil sample, 2 composite samples of surface soil, and 1 sub-surface soil sample. FCS RP personnel screened the PA3 soil samples for plant-related gamma-emitting radionuclides prior to release for transfer to the contracted laboratory. Sample integrity during transfer to the contracted laboratory was ensured through use of a CoC form. Copies of the CoC forms are provided in Appendix D.

Laboratory analyses of soil samples from PA3 did not identify concentrations of plant-related ROCs that would require remediation or special consideration during decommissioning. One soil sample showed positive results for plant-related radioactivity. The gamma analysis for sample PA3-S-04 identified Cs-137 at a concentration approximately equal to 0.1 pCi/g, which represents a small percentage (i.e., <1%) of the NRC screening value for Cs-137 (11 pCi/g) published in NUREG 1757 and is well below any concentration that would require remediation or special consideration during decommissioning. The reported results for all other plant-related gamma-emitting ROCs were below the *a posteriori* MDC values achieved in the analyses. The gamma scans conducted in area PA3, which did not identify any area of elevated radioactivity, support the laboratory data. In addition, the reported concentrations for HTD beta-emitting ROCs in the soil from area PA3 were below the *a posteriori* MDC values. Table 6.3-1 provides a summary of the results of gamma analyses for soil samples, and Table 6.3-2 provides the results for HTD radionuclides.

**Conclusion:** Results of the limited characterization efforts conducted in area PA3 did not identify any radiological issue that would warrant special consideration during decommissioning planning. Although insufficient for use as the release basis for the area, the limited radiological data collected for area PA3 will support the development of a subsequent MARSSIM characterization survey and final status survey.

<sup>a</sup> Reported values and the MDC values are rounded to two significant digits.

<sup>b</sup> Analysis *a posteriori* MDC value.

#### 6.4 AREA OLA1

Environmental area OLA1 includes the area outside the north and west PA fence and encompasses approximately 67,600 m<sup>2</sup>. Most of this region of the site covered with gravel, crushed stone, and engineering fill material brought in to support heavy-haul route construction. The north end of the area between the PA west fence and the Switchyard was used as a staging area for sealand containers holding radioactive materials, including containers of uranium hexafluoride in the early years. RMAs were established historically inside the Old Warehouse and as of this report, still exist within the building. The Old Warehouse has a history of flooding events during which water from inside the building drained to the outside environs. The south part of OLA1 was also used as a travel path for steam generator components transferred to the mausoleum after decontamination within the PA.

The limited characterization survey for area OLA1 included several area gamma scans, including scans around the perimeter of the Old Warehouse and the haul routes to the ISFSI and the mausoleum. With the exception of observing elevated radiation levels at mid-wall height on the east wall of the Old Warehouse (due to radioactive material stored in an RMA inside the Old Warehouse), the gamma scans conducted in area OLA1 did not identify any radiation levels that exceeded ambient background levels in area OLA1. The gamma scan paths are shown on the annotated field maps for OLA1 provided in Appendix A.

The limited characterization survey also included the collection of soil samples at the following locations:

- Run-off flow path from the roll up door on the west side of the Old Warehouse,
- In front of the door on the east side of the Old Warehouse,
- The drainage ditch receiving storm water from the PA and at the junction of the storm water drainage from the PA and the storm water drainage from the east area of OLA1,
- The west side of the heavy haul route (at top of slope to the drainage ditch), and
- Between two chemical storage sheds located approximately 30 feet west of the Old Warehouse.

Figure 6.4 shows the sampling locations inside area OLA1.

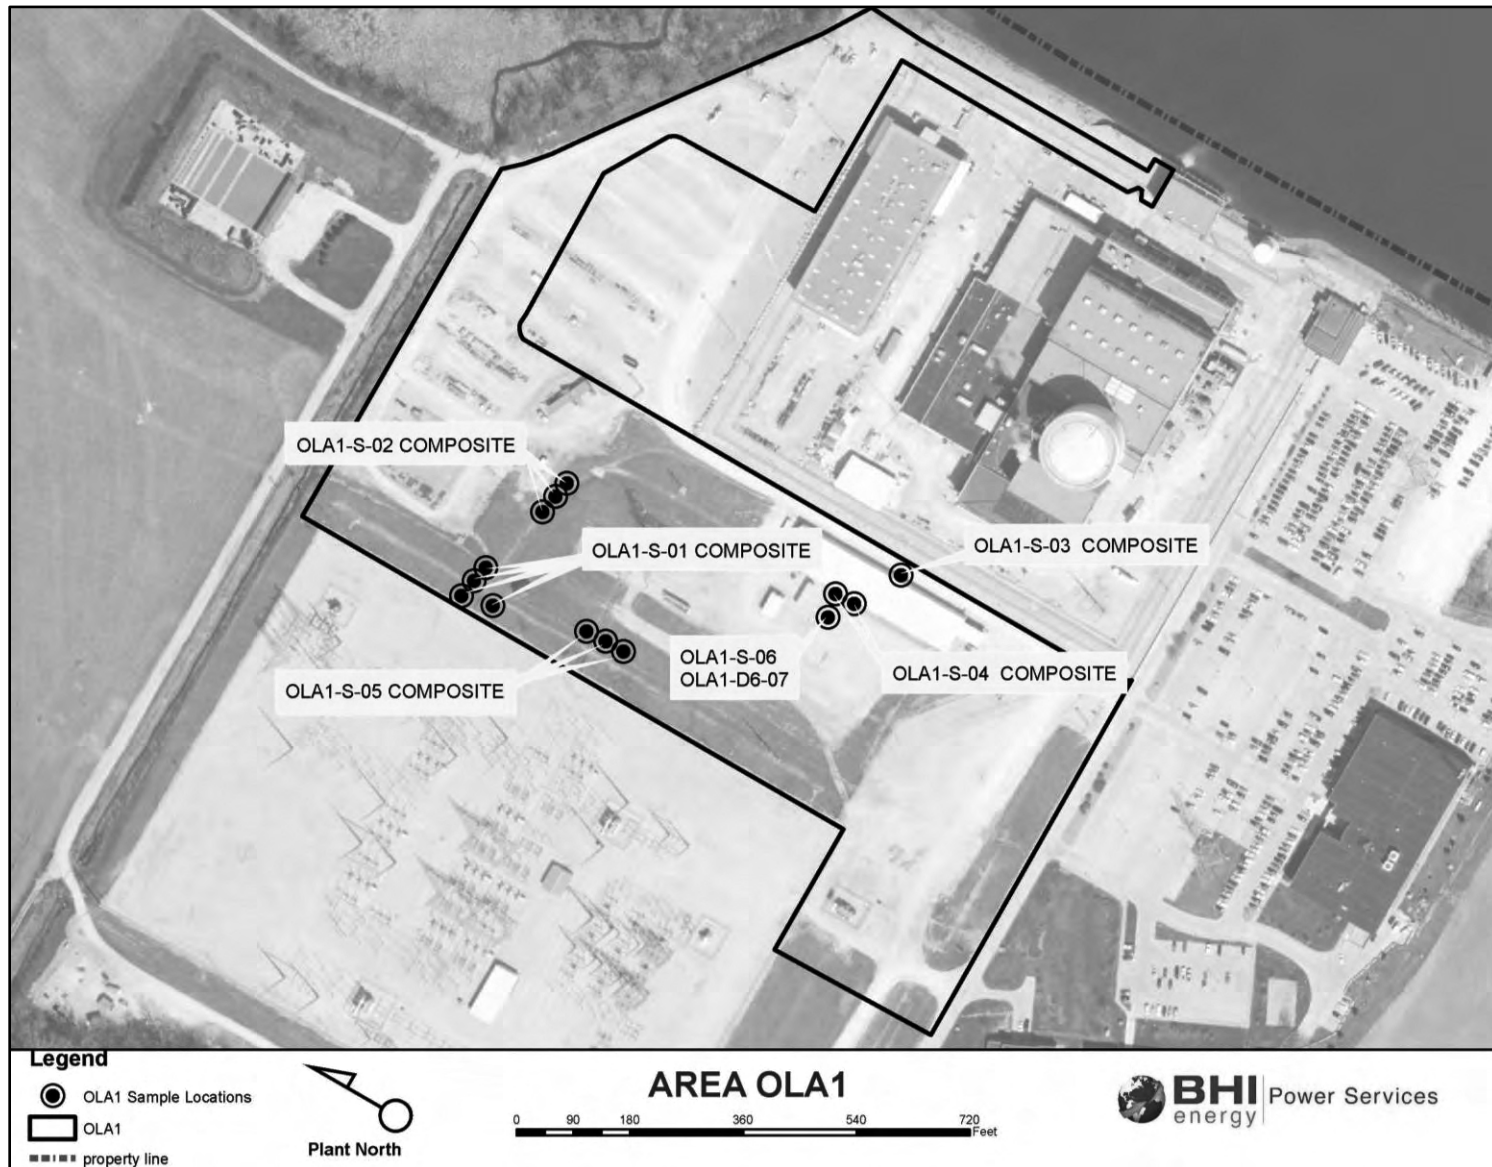

Seven soil samples were collected in area OLA1: 1 surface soil sample, 5 composite samples of surface soil, and 1 sub-surface soil sample. Sample integrity during transfer to the contracted laboratory was ensured through use a CoC form. Copies of the CoC forms are provided in Appendix D.

The contracted laboratory performed gamma analysis on each sample. Laboratory analyses of soil samples from PA3 did not identify concentrations of plant-related ROCs that would require remediation or special consideration during decommissioning. Only one soil sample showed positive results for plant-related radioactivity. Gamma analysis of sample OLA1-S-06 identified Cs-137 at a concentration approximately equal to 0.2 pCi/g, which represents a small percentage (i.e., <2%) of the NRC screening value for Cs-137 (11 pCi/g) published in NUREG 1757, and is well below any concentration that would require remediation or special consideration during decommissioning. All other reported gamma analysis results were below the *a posteriori* MDC values achieved in the analyses. With the gamma scan exception noted above, the gamma scans conducted in area OLA1 support the laboratory data. Table 6.4 provides a summary of the results of gamma analyses for soil samples. Analyses for HTD radionuclides were not performed on samples from this area.

**Conclusion:** Results of the limited characterization efforts conducted in area OLA1 did not identify any radiological concerns that would warrant special consideration during decommissioning planning.

Although insufficient for use as the release basis for area OLA1, the collected data will support development of subsequent characterization surveys and MARSSIM final status surveys.

**Figure 6.4** Soil Sampling Locations within Environmental Area OLA1

Table 6.4-1 Summary of Gamma Analysis Results for Soil Samples Collected in Area OLA1

Location Code	Cs-137 <sup>a</sup>	
	Reported Value pCi/g	MDC <sup>b</sup> pCi/g
OLA1-S-01	3.1 E-02	9.1 E-02
OLA1-S-02	2.3 E-02	6.1 E-02
OLA1-S-03	5.9 E-03	7.7 E-02
OLA1-S-04	2.5 E-02	6.4 E-02
OLA1-S-05	1.2 E-02	8.2 E-02
OLA1-S-06	2.3 E-01	6.0 E-02
OLA1-D6-07	0.0 E+00	4.6 E-02

<sup>a</sup> Reported values from gamma analysis and the MDC values are rounded to two significant digits.

<sup>b</sup> Analysis *a posteriori* MDC value.

Note: Results for Cs-137 are shown as the expected primary ROC. However, it is important to note that no other plant-related gamma emitting radionuclides were identified by gamma spectroscopy analysis.

## 6.5 AREA OLA2

Environmental area OLA2 includes an area within the Switchyard fence that was outside the berm built to protect the Switchyard during the 2011 flood. It encompasses approximately 29,300 m<sup>2</sup>. There is no history of use or storage of radioactive materials in area OLA2. However, area OLA2 is identified as an impacted area solely because of the potential for cross-contamination resulting from the flood and recovery efforts. Any residual contamination, if present in area OLA2, is not expected to exceed a small fraction of 10CFR20.1402 radiological criteria for unrestricted use.

The limited characterization survey for area OLA2 included several area gamma scans that focused on the east side of the OLA2, which is where 2011 flood waters travelling from the PA potentially transported licensed radioactivity to the closest eastern edge of the berm protecting the switchyard. The gamma scans conducted along the length of the east boundary of area OLA2 did not identify any radiation level that exceeded the ambient background level in the area. The gamma scan paths are shown on the annotated field map for OLA2 provided in Appendix A.

The limited characterization survey also included the collection of 3 soil samples at the following locations:

- Southeast corner of OLA2,
- Northeast corner of OLA2, and
- The storm drain located approximately 20 feet north of OLA2-S-02 sample location in the northeast corner.

Figure 6.5 shows the sampling locations inside area OLA2. Sample integrity during transfer to the contracted laboratory was ensured through use a CoC form. Copies of the CoC forms are provided in Appendix D.

The contracted laboratory performed gamma analysis on each sample. Laboratory analyses of soil samples from OLA2 did not identify concentrations of plant-related ROCs that would require remediation or special consideration during decommissioning. All reported gamma analysis results were below the *a posteriori* MDC values achieved in the analyses. The gamma scans conducted in area OLA2, which did not identify any area of elevated radioactivity, support the laboratory data. Table 6.5 provides a summary of the results of gamma analyses for soil samples.

**Conclusion:** Results of the limited characterization efforts conducted in area OLA2 did not identify any radiological issue that would warrant special consideration during decommissioning planning. Although insufficient for use as the release basis for area OLA2, the collected data will support development of subsequent characterization surveys and MARSSIM final status surveys.

**Figure 6.5      Soil Sampling Locations within Environmental Area OLA2**

Table 6.5 Summary of Gamma Analysis Results for Soil Samples Collected in Area OLA2

Location Code	Cs-137 <sup>a</sup>	
	Reported Value pCi/g	MDC <sup>b</sup> pCi/g
OLA2-S-01	2.8 E-02	3.8 E-02
OLA2-S-02	3.6 E-02	5.5 E-02
OLA2-S-03	1.4 E-02	5.6 E-02

<sup>a</sup> Reported values from gamma analysis and the MDC values are rounded to two significant digits.

<sup>b</sup> Analysis *a posteriori* MDC value.

Note: Results for Cs-137 are shown as the expected primary ROC. However, it is important to note that no other plant-related gamma emitting radionuclides were identified by gamma spectroscopy analysis.

### 6.6 AREA OLA3

Environmental area OLA3 is approximately 38,500 m<sup>2</sup> in size and includes a portion of Fish Creek, which runs west to east along the northern boundary, discharging to the Missouri River. Gravel and crushed stone covers most of OLA3; however, the road network in the southern portions of OLA3 includes engineering fill material brought in when the heavy-haul routes were constructed. Sealand containers housing outage equipment and materials were staged in the northwest corner of the switchyard area. Area OLA3 also includes the travel path to the mausoleum, which is the structure that houses the old steam generators and related components removed in 2006.

The characterization survey for area OLA3 included gamma scans on the west and south road network, the open area in front of the mausoleum, and banks of Fish Creek. The gamma scans did not identify any radiation level that exceeded the ambient background level in the area. The gamma scan paths are shown on the annotated field maps for OLA3 provided in Appendix A.

The limited characterization survey also included the collection of soil samples at the following locations:

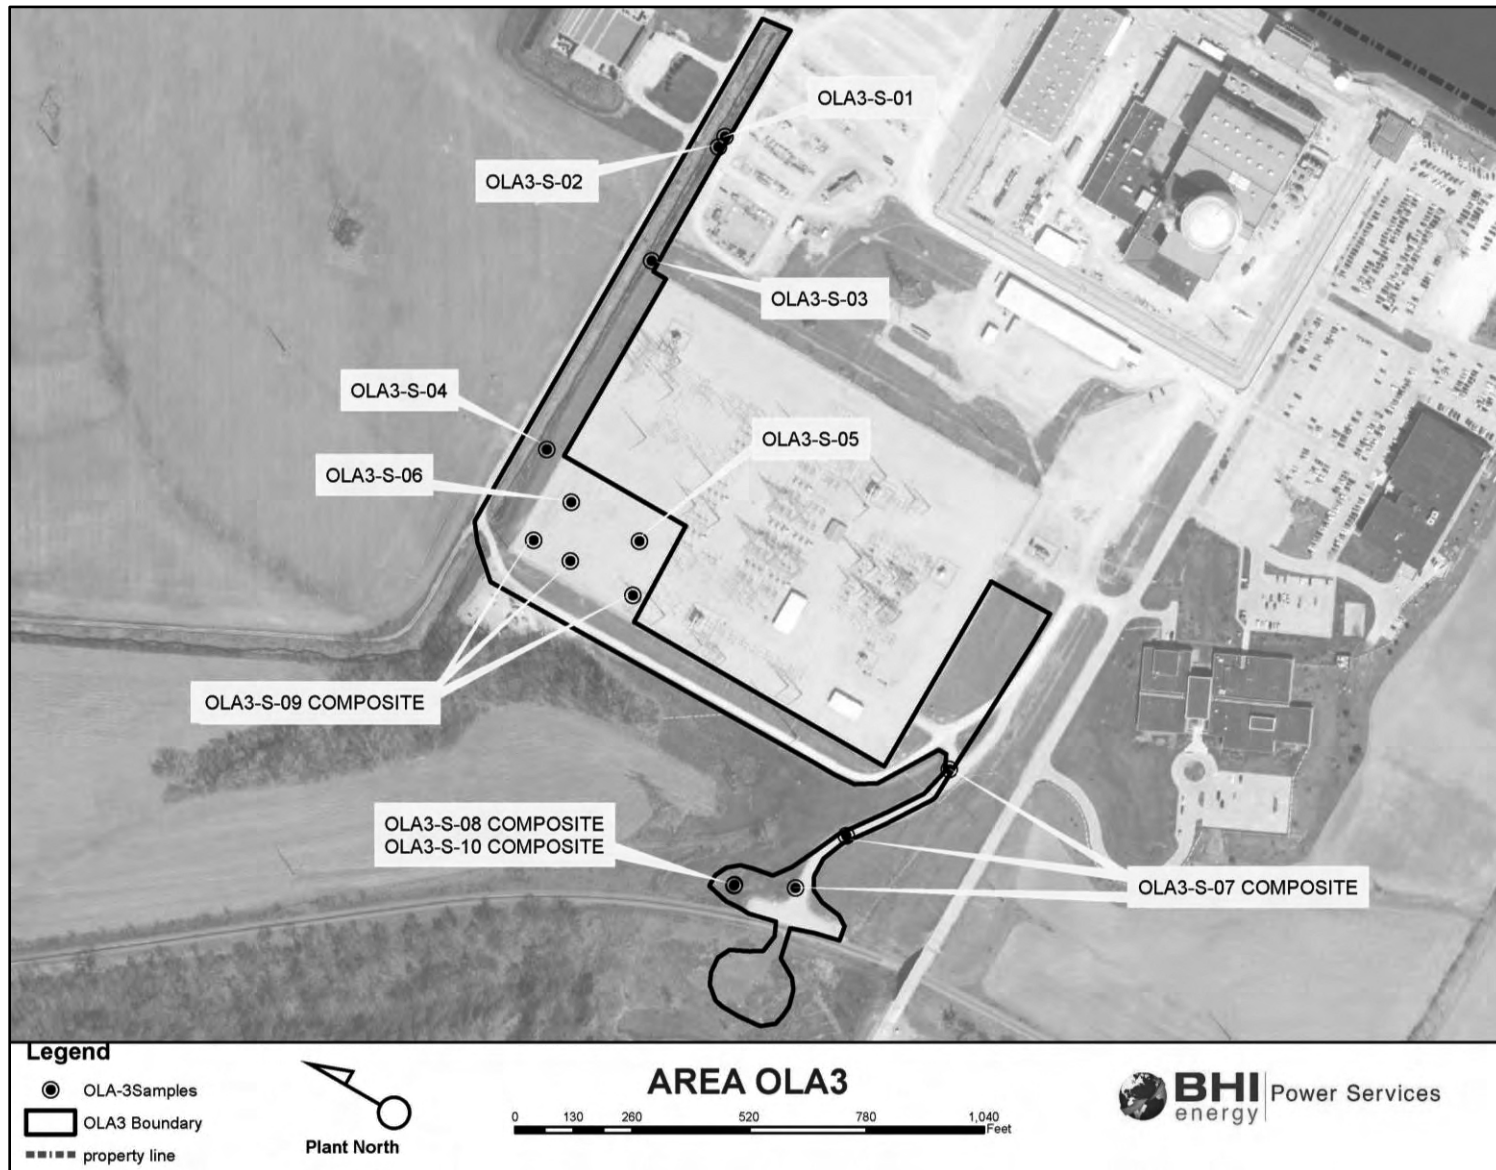

- West end of Fish Creek,
- Mid-point of the portion of Fish Creek within OLA3,
- East end of Fish Creek,
- Storm drain outfall at the east end of Fish Creek
- Container storage area at the northwest corner of the switchyard,
- Route to the mausoleum, and
- Sand piles located near the mausoleum.

Figure 6.6 shows the sampling locations inside area OLA3.

Ten soil samples were collected in area OLA1: 4 surface soil samples from the Fish Creek area, 2 surface soil samples and 1 composite surface sample from the container staging area in the northwest corner of the switchyard, 1 composite surface soil sample from the haul route to the mausoleum, and 2 composite soil samples from the sand piles located near the mausoleum. Sample integrity during transfer to the contracted laboratory was ensured through use a CoC form. Copies of the CoC forms are provided in Appendix D.

The contracted laboratory performed gamma analysis on each sample. One soil sample showed positive results for plant-related radioactivity. Gamma analysis of sample OLA3-S-04 identified Cs-137 at a concentration approximately equal to 0.1 pCi/g, which represents a small percentage (i.e., <1%) of the NRC screening value for Cs-137 (11 pCi/g) published in NUREG 1757, and is well below any concentration that would require remediation or special consideration during decommissioning. All other reported gamma analysis results were below the *a posteriori* MDC values achieved in the analyses. The gamma scans conducted in area OLA3, which did not identify any area of elevated radioactivity, support the laboratory data. Table 6.6 provides a summary of the results of gamma analyses for soil samples.

**Conclusion:** Results of the limited characterization efforts conducted in area OLA3 did not identify any radiological issue that would warrant special consideration during decommissioning planning. Although insufficient for use as the release basis for area OLA3, the collected data will support development of subsequent characterization surveys and MARSSIM final status surveys.

OLA3-S-10	-2.0 E-03	4.4 E-02

<sup>a</sup> Reported values from gamma analysis and the MDC values are rounded to two significant digits.

<sup>b</sup> Analysis *a posteriori* MDC value.

Note: Results for Cs-137 are shown as the expected primary ROC. However, it is important to note that no other plant-related gamma emitting radionuclides were identified by gamma spectroscopy analysis.

### 6.7 AREA OLA4

Environmental area OLA4 encompasses approximately 109,000 m<sup>2</sup> and consists of grassy areas and parking lots surrounding the Training Building and the Administration Building, as well as the old west sanitary lagoon. This region of the site is covered with gravel, crushed stone, asphalt pavement, concrete walks, and grass covered soil. The old Chemical Pump House and Chemistry Mix Basin were located at the river's edge in the northeast section of OLA4. These structures were associated with river water processing; no radioactive materials were involved in the processing.

The characterization survey for area OLA4 included gamma scans in the north, east, and southwest sections of OLA4. The gamma scans did not identify any radiation level that exceeded the ambient background level in the area. The gamma scan paths are shown on the annotated field maps for OLA4 provided in Appendix A.

The limited characterization survey also included the collection of 3 soil samples at the following locations:

- Storm drain located east of the Training Building (surface soil), and
- In area of the now closed old west sanitary lagoon (surface and sub-surface soil).

Figure 6.7 shows the sampling locations inside area OLA4. The integrity of the soil samples was ensured during transfer to the contracted laboratory by the use of a CoC form. Copies of the CoC forms are provided in Appendix D.

The contracted laboratory performed gamma analysis on each sample. One soil sample showed positive results for plant-related radioactivity. Gamma analysis of sample OLA4-D3-03, collected from the old west sanitary lagoon area, identified Cs-137 at a concentration approximately equal to 0.07 pCi/g. However, that concentration represents a small percentage (i.e., <0.7%) of the NRC screening value for Cs-137 (11 pCi/g) published in NUREG 1757, and is well below any concentration that would require remediation or special consideration during decommissioning. All other reported gamma analysis results were below the *a posteriori* MDC values achieved in the analyses. The gamma scans conducted in area OLA4, which did not identify any area of elevated radioactivity, support the laboratory data. Table 6.7 provides a summary of the results of gamma analyses for soil samples.

**Conclusion:** Results of the limited characterization efforts conducted in area OLA4 did not identify any radiological issue that would warrant special consideration during decommissioning planning. Although insufficient for use as the release basis for area OLA4, the collected data will support development of subsequent characterization surveys and MARSSIM final status surveys.

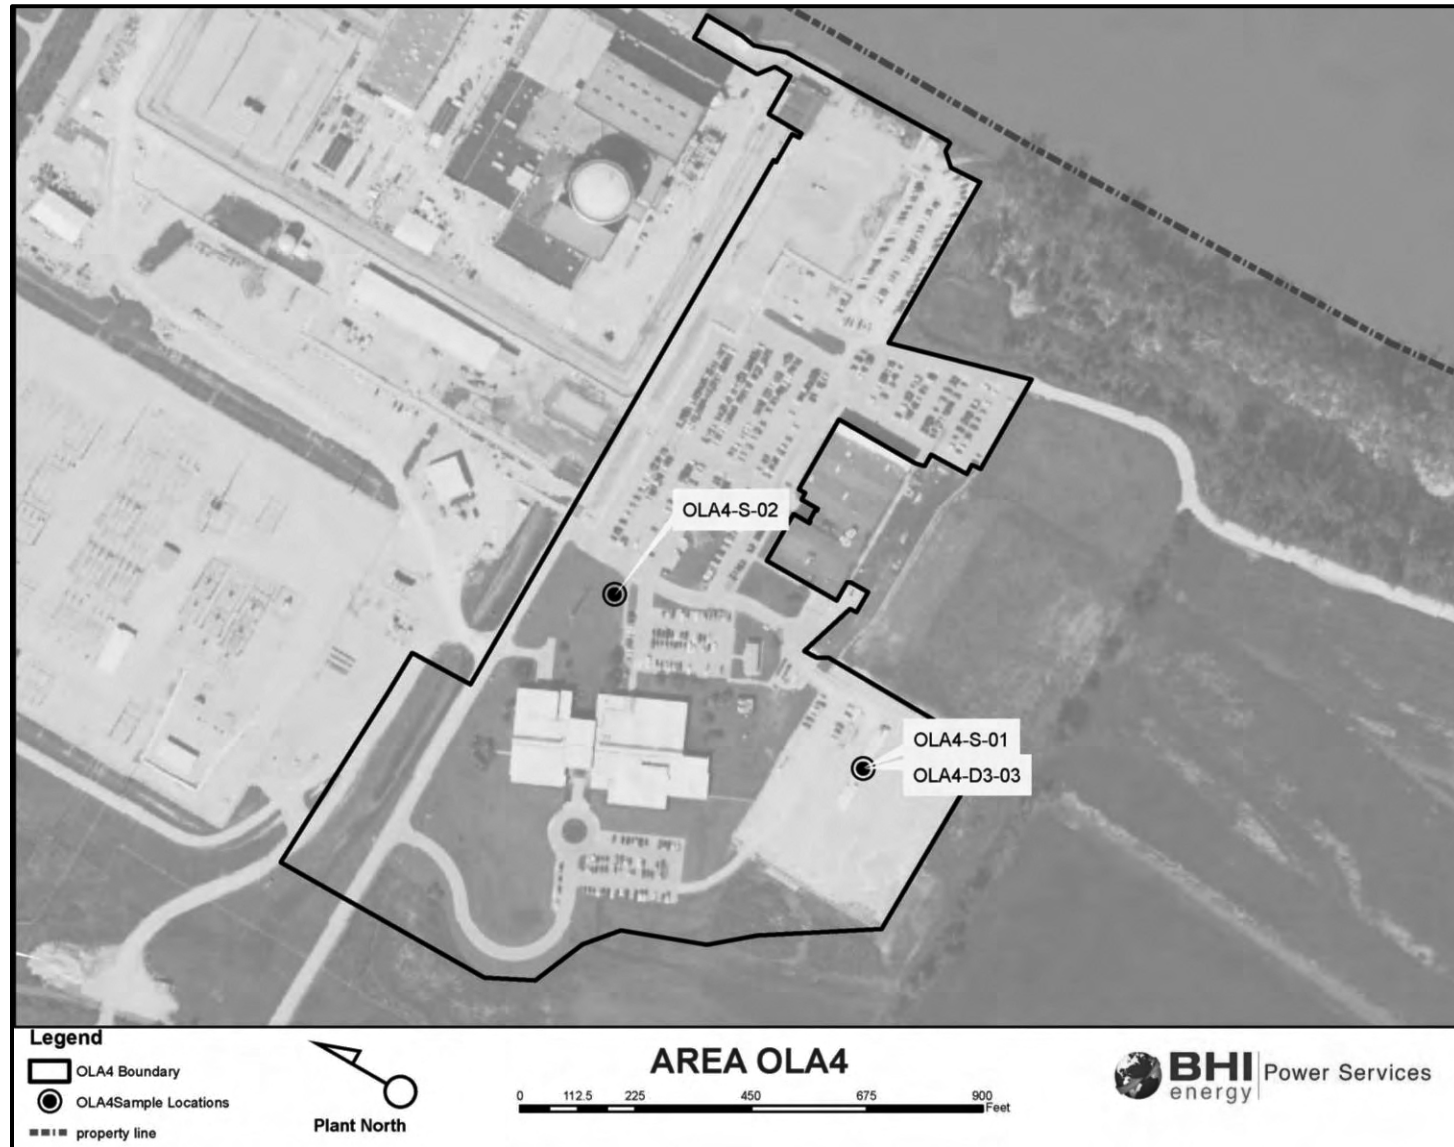

Figure 6.7 Soil Sampling Locations within Environmental Area OLA4

Table 6.7 Summary of Gamma Analysis Results for Soil Samples Collected in Area OLA4

Location Code	Cs-137 <sup>a</sup>	
	Reported Value pCi/g	MDC <sup>b</sup> pCi/g
OLA4-S-01	7.5 E-03	7.3 E-02
OLA4-S-02	2.6 E-02	8.2 E-02
OLA4-D3-03	7.1 E-02	5.2 E-02

<sup>a</sup> Reported values from gamma analysis and the MDC values are rounded to two significant digits.

<sup>b</sup> Analysis *a posteriori* MDC value.

Note: Results for Cs-137 are shown as the expected primary ROC. However, it is important to note that no other plant-related gamma emitting radionuclides were identified by gamma spectroscopy analysis.

**6.8 AREA OLA5**

Environmental Area OLA5 is on the southeast section of the site property and encompasses approximately 263,000 m<sup>2</sup>. Most of this region of the site covered with vegetative growth. OPPD leases a large portion of the area for use as agricultural land. A closed landfill that contains pre-operation construction debris and non-radioactive waste materials (e.g., resin) from the processing of river water is located in the northeast corner. The area within the northern portion of OLA5 is the site of the now closed old east sanitary lagoon. The new sanitary lagoons are located in the southeast section of OLA5. An application area is located to the west of the lagoons for disposal of lagoon water. Although detectable Cs-137 has been found in the sludge from these new lagoons, licensed radioactivity has not been detected in the lagoon water.

The characterization survey for area OLA5 included gamma scans in the local areas surrounding each soil sample location as well as walk-over gamma scan in the application area established for the lagoon water. The gamma scans did not identify any radiation levels that exceeded the observed ambient background levels in the area. The gamma scan paths are shown on the annotated field map for OLA5 provided in Appendix A.

The limited characterization survey also included the collection of soil samples at the following locations:

- Behind the Administration Building where trailers were located during the flood recovery effort,
- At a storm drain behind the Training Building where flood waters would have drained to, and
- Within the area of the now closed old east sanitary lagoon, and
- Within the lagoon water application area encompassing the crops in the southwest portion of OLA5.

Figure 6.8 shows the sampling locations inside area OLA5. Four soil samples were collected: 3 surface soils from the locations identified above and 1 sub-surface at the sample location in the old east sanitary lagoon area. The integrity of the soil samples was ensured during transfer to the contracted laboratory by the use a CoC form. Copies of the CoC forms are provided in Appendix D.

The contracted laboratory performed gamma analysis on each sample. Two soil samples showed positive results for plant-related radioactivity. Gamma analysis of sample OLA5-S-03, collected from the area where the flood recovery trailers were staged, identified Cs-137 at a concentration approximately equal to 0.2 pCi/g, and gamma analysis of sample OLA5-S-01, collected from the lagoon water application area, identified Cs-137 at a concentration approximately equal to 0.4 pCi/g. However, those concentrations represent small percentages (i.e., <2% and <4%, respectively) of the NRC screening value for Cs-137 (11 pCi/g) published in NUREG 1757, and are well below concentrations that would require remediation or special consideration during decommissioning. All other reported gamma analysis results were below the *a posteriori* MDC values achieved in the analyses. The gamma scans conducted in area OLA5, which did not identify any area of elevated radioactivity, support the laboratory data. Table 6.8 provides a summary of the results of gamma analyses for soil samples.

**Conclusion:** Results of the limited characterization efforts conducted in area OLA5 did not identify any radiological issue that would warrant special consideration during decommissioning planning. Although insufficient for use as the release basis for area OLA5, the collected data will support development of subsequent characterization surveys and MARSSIM final status surveys.

OLA5-S-03	1.9 E-01	7.5 E-02
OLA5-D3-04	7.1 E-02	7.8 E-02

<sup>a</sup> Reported values from gamma analysis and the MDC values are rounded to two significant digits.

<sup>b</sup> Analysis *a posteriori* MDC value.

Note: Results for Cs-137 are shown as the expected primary ROC. However, it is important to note that no other plant-related gamma emitting radionuclides were identified by gamma spectroscopy analysis.

## 6.9 AREA OLA6

Environmental Area OLA6 is located on the hillside west of the Steam Generator Mausoleum and includes approximately 8,100 m<sup>2</sup>. Soil from OLA6 was excavated and used to build the berm that protected the Switchyard during the 2011 flood. Prior to use, the soil from OLA6 was radiologically clean because there was no historical use or storage of radioactive materials on the west hillside. When the Switchyard berm was removed during the flood recovery project, most of soil was returned to the west hillside from where it originated. Some of the berm soil was used as a base for the flood recovery trailers behind the Administration Building, which was subsequently returned to the west hillside when the flood recovery trailers were removed. In addition, silt and sandbags from parking lots and radiologically released silt and sand from the PA was placed in area OLA6 (post flood recovery).

The characterization survey for area OLA6 included gamma scans in the local areas surrounding each soil sample location. Each scanned area was approximately 100 ft<sup>2</sup>. The gamma scans did not identify any radiation levels that exceeded the observed ambient background levels in the area. The gamma scan paths are shown on the annotated field map for OLA6 provided in Appendix A.

Area OLA6 was visually divided into 3 sections of similar size, and 1 surface soil sample and 1 sub-surface soil sample were collected at the center of each section. Figure 6.9 shows the sampling locations inside area OLA6. The integrity of the soil samples was ensured during transfer to the contracted laboratory by the use a CoC form. Copies of the CoC forms are provided in Appendix D.

The contracted laboratory performed gamma analysis on each sample. Laboratory analyses of soil samples from OLA6 did not identify concentrations of plant-related ROCs that would require remediation or special consideration during decommissioning. All reported gamma analysis results were below the *a posteriori* MDC values achieved in the analyses. The gamma scans conducted around the sample locations did not identify elevated radioactivity, supporting the laboratory results. Table 6.9 provides a summary of the results of gamma analyses for soil samples.

**Conclusion:** Results of the limited characterization efforts conducted in area OLA6 did not identify any radiological issue that would warrant special consideration during decommissioning planning. Although insufficient for use as the release basis for area OLA6, the collected data will support development of subsequent characterization surveys and MARSSIM final status surveys.

**Figure 6.9 Soil Sampling Locations within Environmental Area OLA6**

**Table 6.9 Summary of Gamma Analysis Results for Soil Samples Collected in Area OLA6**

Location Code	Cs-137 <sup>a</sup>	
	Reported Value pCi/g	MDC <sup>b</sup> pCi/g
OLA6-S-01	2.4 E-02	8.3 E-02
OLA6-D1.5-02	6.7 E-03	7.6 E-02
OLA6-S-03	2.2 E-02	6.9 E-02
OLA6-D2-04	4.3 E-02	1.1 E-01
OLA6-S-05	-3.7 E-02	8.7 E-02
OLA6-D2-06	-2.1 E-02	6.3 E-02

<sup>a</sup> Reported values from gamma analysis and the MDC values are rounded to two significant digits.

<sup>b</sup> Analysis *a posteriori* MDC value.

Note: Results for Cs-137 are shown as the expected primary ROC. However, it is important to note that no other plant-related gamma emitting radionuclides were identified by gamma spectroscopy analysis.

### SECTION 7 CONCLUSIONS

The following conclusions were reached based on the radiological data collected under the LRCP:

- The radiological data collected during the limited characterization survey support closure of data gaps associated with environmental (open land) areas at the Fort Calhoun site, as identified in the *Omaha Public Power District Fort Calhoun Station Historical Site Assessment*.
- Implementation of *Limited Radiological Characterization Survey Plan for Decommissioning of the Fort Calhoun Nuclear Power Station* met the DQOs established to ensure the quality of the collected data.
- The concentrations of plant-related gamma-emitting radionuclides in soil samples from the environmental areas of the FCS site were below the *a posteriori* MDC values and/or small fractions of the NRC screening levels published in NUREG 1757, which provides evidence that remediation or special consideration will not likely be required for the environmental areas during decommissioning planning.
- Similarly, measured concentrations of hard-to-detect beta-emitting radionuclides, such as strontium-90, in soil samples from the PA were below the *a posteriori* MDC values.
- The collected radiological data during the FCS limited site radiological surveys are insufficient for use as release basis for the impacted environmental areas.

**SECTION 8 RECOMMENDATIONS**

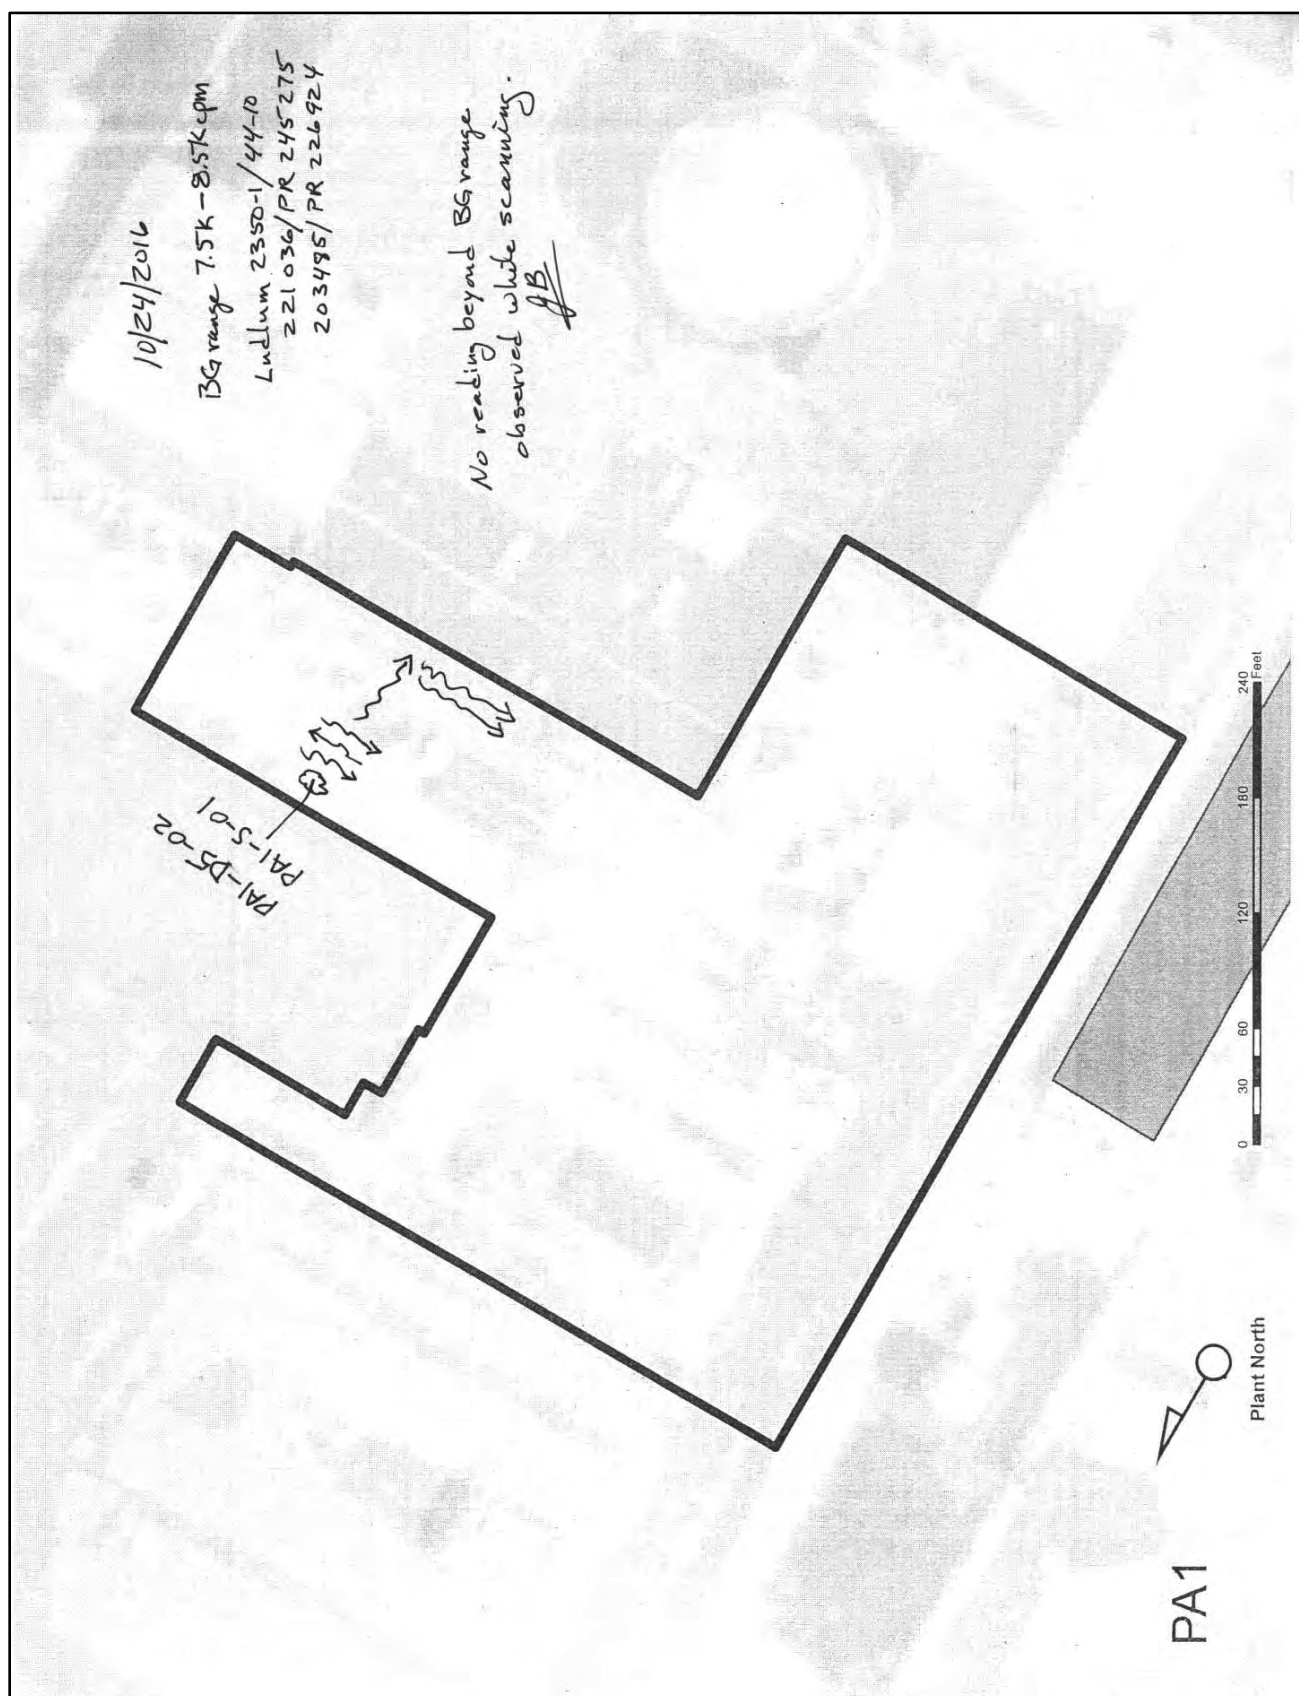

1. The scope of this survey effort focused on closing data gaps identified for each potentially impacted environmental area in the FCS HSA and identifying potential radiological conditions that would require special consideration during decommissioning planning. Given that limited scope, a MARSSIM characterization survey should be developed and implemented to document the current radiological conditions in each impacted environmental area. Implementation of MARSSIM characterization surveys would generate the statistical power necessary for FSS planning and increase confidence in a successful FSS program. Regardless of the decommissioning path selected by OPPD, this action would provide solid support for future FSS activities and license termination.
2. The limited scope of this project did not include the collection of sub-surface soil from under building foundations (e.g., Containment, SFP Building, Auxiliary Building, Radwaste Processing Building) or soil adjacent to underground systems, structures, and components (SSCs) containing radioactive materials (e.g., radioactive waste lines and sumps). Additional sub-surface sampling at, near, or under building foundations and buried SSCs would provide valuable data regarding the radiological status of site sub-surface soil, which, in turn, would further support decommissioning planning, FSS, and license termination.
3. The soil concentrations for ROCs identified by laboratory analyses of the soil sample collected during this project were assessed against the conservative NRC screening values published in NUREG-1757. However, per NUREG-1757, OPPD-FCS will likely fall into a decommissioning group required to perform site-specific dose modeling; therefore, OPPD-FCS will be expected to develop site-specific release criteria (i.e., site-specific derived concentration guideline levels (DCGLs)). Site-specific DCGL values, including a technical basis document to identify a site-specific suite of ROCs, can be developed during the early stages of decommissioning, would reduce much of the conservatism found in the NRC screening values, and support future decommissioning planning, FSS activities, and license termination planning.

### Certificate of Analysis Report for

BHIE001 BHI Energy Power Services LLC

Client SDG: 409238 GEL Work Order: 409238

**The Qualifiers in this report are defined as follows:**

- \* A quality control analyte recovery is outside of specified acceptance criteria
- \*\* Analyte is a Tracer compound
- \*\* Analyte is a surrogate compound
- U Analyte was analyzed for but not detected above the Lc
- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- UI Gamma Spectroscopy—Uncertain identification

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Lindsay Fabra.

- Notes:**
1. LLDs are a-priori values.
  2. MDCs are calculated a-posteriori values.
  3. Gamma spectroscopy analysis results are calculated from a measurement using only one gamma energy line.
  4. Basis: "W" indicates results "As Received"; "D" indicates results "Dry Weight Corrected".

**Qualifiers:** U - Target isotope was analyzed for but not detected above the MDC and LLD.  
UI - Uncertain identification for gamma spectroscopy.  
X - Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.  
M - Reported result is less than the LLD and greater than the MDC.

**Notes:**

1. LLDs are a-priori values.
2. MDCs are calculated a-posteriori values.
3. Gamma spectroscopy analysis results are calculated from a measurement using only one gamma energy line.
4. Basis: "W" indicates results "As Received"; "D" indicates results "Dry Weight Corrected".

**Qualifiers:**

- U - Target isotope was analyzed for but not detected above the MDC and LLD.
- UI - Uncertain identification for gamma spectroscopy.
- X - Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.
- M - Reported result is less than the LLD and greater than the MDC.

**Notes:**

1. LLDs are a-priori values.
2. MDCs are calculated a-posteriori values.
3. Gamma spectroscopy analysis results are calculated from a measurement using only one gamma energy line.
4. Basis: "W" indicates results "As Received"; "D" indicates results "Dry Weight Corrected".

**Qualifiers:**

- U - Target isotope was analyzed for but not detected above the MDC and LLD.
- UI - Uncertain identification for gamma spectroscopy.
- X - Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.
- M - Reported result is less than the LLD and greater than the MDC.

**Notes:**

1. LLDs are a-priori values.
2. MDCs are calculated a-posteriori values.
3. Gamma spectroscopy analysis results are calculated from a measurement using only one gamma energy line.
4. Basis: "W" indicates results "As Received"; "D" indicates results "Dry Weight Corrected".

**Qualifiers:**

- U - Target isotope was analyzed for but not detected above the MDC and LLD.
- UI - Uncertain identification for gamma spectroscopy.
- X - Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.
- M - Reported result is less than the LLD and greater than the MDC.

08-NOV-16	Co-56	-1.85E-08 +/- 3.10E-08	uCi/g	D	3.21E-08	4.77E-08		U
08-NOV-16	Co-57	1.20E-08 +/- 2.03E-08	uCi/g	D	2.10E-08	3.98E-08		U

**Notes:**

1. LLDs are a-priori values.
2. MDCs are calculated a-posteriori values.
3. Gamma spectroscopy analysis results are calculated from a measurement using only one gamma energy line.
4. Basis: "W" indicates results "As Received"; "D" indicates results "Dry Weight Corrected".

**Qualifiers:**

- U - Target isotope was analyzed for but not detected above the MDC and LLD.
- UI - Uncertain identification for gamma spectroscopy.
- X - Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.
- M - Reported result is less than the LLD and greater than the MDC.

25-NOV-16	Cm-243/244	-5.92E-08 +/- 4.93E-07	uCi/g	W	4.95E-07	1.16E-06	1.00E-04	U
25-NOV-16	Cm-245/246	-1.03E-07 +/- 5.75E-07	uCi/g	W	5.77E-07	1.45E-06	1.00E-04	U
25-NOV-16	Ni-59	6.23E-04 +/- 8.29E-04	uCi/g	W	8.77E-04	1.63E-03	2.20E-01	U
29-NOV-16	I-129	0.00E+00 +/- 2.91E-06	uCi/g	W	0.00E+00	4.02E-06	8.00E-05	U

**Notes:**

1. LLDs are a-priori values.
2. MDCs are calculated a-posteriori values.
3. Gamma spectroscopy analysis results are calculated from a measurement using only one gamma energy line.
4. Basis: "W" indicates results "As Received"; "D" indicates results "Dry Weight Corrected".

**Qualifiers:**

- U - Target isotope was analyzed for but not detected above the MDC and LLD.
- UI - Uncertain identification for gamma spectroscopy.
- X - Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.
- M - Reported result is less than the LLD and greater than the MDC.

08-NOV-16	Co-57	2.51E-09 +/- 2.32E-08	uCi/g	D	2.33E-08	4.18E-08		U

**Notes:**

1. LLDs are a-priori values.
2. MDCs are calculated a-posteriori values.
3. Gamma spectroscopy analysis results are calculated from a measurement using only one gamma energy line.
4. Basis: "W" indicates results "As Received"; "D" indicates results "Dry Weight Corrected".

**Qualifiers:**

- U - Target isotope was analyzed for but not detected above the MDC and LLD.
- UI - Uncertain identification for gamma spectroscopy.
- X - Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.
- M - Reported result is less than the LLD and greater than the MDC.

**Notes:**

1. LLDs are a-priori values.
2. MDCs are calculated a-posteriori values.
3. Gamma spectroscopy analysis results are calculated from a measurement using only one gamma energy line.
4. Basis: "W" indicates results "As Received"; "D" indicates results "Dry Weight Corrected".

**Qualifiers:**

- U - Target isotope was analyzed for but not detected above the MDC and LLD.
- UI - Uncertain identification for gamma spectroscopy.
- X - Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.
- M - Reported result is less than the LLD and greater than the MDC.

**Notes:**

1. LLDs are a-priori values.
2. MDCs are calculated a-posteriori values.
3. Gamma spectroscopy analysis results are calculated from a measurement using only one gamma energy line.
4. Basis: "W" indicates results "As Received"; "D" indicates results "Dry Weight Corrected".

**Qualifiers:**

- U - Target isotope was analyzed for but not detected above the MDC and LLD.
- UI - Uncertain identification for gamma spectroscopy.
- X - Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.
- M - Reported result is less than the LLD and greater than the MDC.

08-NOV-16	Zn-65	-2.24E-08 +/- 6.75E-08	uCi/g	D	6.83E-08	1.11E-07		U
08-NOV-16	Zr-95	3.69E-08 +/- 5.37E-08	uCi/g	D	5.62E-08	1.13E-07		U

**Notes:**

1. LLDs are a-priori values.
2. MDCs are calculated a-posteriori values.
3. Gamma spectroscopy analysis results are calculated from a measurement using only one gamma energy line.
4. Basis: "W" indicates results "As Received"; "D" indicates results "Dry Weight Corrected".

**Qualifiers:**

- U - Target isotope was analyzed for but not detected above the MDC and LLD.
- UI - Uncertain identification for gamma spectroscopy.
- X - Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.
- M - Reported result is less than the LLD and greater than the MDC.

25-NOV-16	Cm-245/246	4.22E-07 +/- 7.18E-07	uCi/g	W	7.21E-07	6.33E-07	1.00E-04	U
25-NOV-16	Ni-59	-1.78E-04 +/- 7.55E-04	uCi/g	W	7.59E-04	1.27E-03	2.20E-01	U
29-NOV-16	I-129	-4.54E-07 +/- 3.59E-06	uCi/g	W	3.60E-06	7.73E-06	8.00E-05	U

**Notes:**

1. LLDs are a-priori values.
2. MDCs are calculated a-posteriori values.
3. Gamma spectroscopy analysis results are calculated from a measurement using only one gamma energy line.
4. Basis: "W" indicates results "As Received"; "D" indicates results "Dry Weight Corrected".

**Qualifiers:** U - Target isotope was analyzed for but not detected above the MDC and LLD.  
UI - Uncertain identification for gamma spectroscopy.  
X - Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.  
M - Reported result is less than the LLD and greater than the MDC.

**Notes:**

1. LLDs are a-priori values.
2. MDCs are calculated a-posteriori values.
3. Gamma spectroscopy analysis results are calculated from a measurement using only one gamma energy line.
4. Basis: "W" indicates results "As Received"; "D" indicates results "Dry Weight Corrected".

**Qualifiers:**

- U - Target isotope was analyzed for but not detected above the MDC and LLD.
- UI - Uncertain identification for gamma spectroscopy.
- X - Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.
- M - Reported result is less than the LLD and greater than the MDC.

**Notes:**

1. LLDs are a-priori values.
2. MDCs are calculated a-posteriori values.
3. Gamma spectroscopy analysis results are calculated from a measurement using only one gamma energy line.
4. Basis: "W" indicates results "As Received"; "D" indicates results "Dry Weight Corrected".

**Qualifiers:**

- U - Target isotope was analyzed for but not detected above the MDC and LLD.
- UI - Uncertain identification for gamma spectroscopy.
- X - Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.
- M - Reported result is less than the LLD and greater than the MDC.

**Notes:**

1. LLDs are a-priori values.
2. MDCs are calculated a-posteriori values.
3. Gamma spectroscopy analysis results are calculated from a measurement using only one gamma energy line.
4. Basis: "W" indicates results "As Received"; "D" indicates results "Dry Weight Corrected".

**Qualifiers:**

- U - Target isotope was analyzed for but not detected above the MDC and LLD.
- UI - Uncertain identification for gamma spectroscopy.
- X - Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.
- M - Reported result is less than the LLD and greater than the MDC.

12-NOV-16	Cr-51	-6.12E-08 +/- 2.82E-07	uCi/g	D	2.83E-07	5.14E-07		U
12-NOV-16	Co-56	-7.59E-09 +/- 2.81E-08	uCi/g	D	2.83E-08	5.13E-08		U
12-NOV-16	Co-57	-6.42E-09 +/- 1.90E-08	uCi/g	D	1.92E-08	3.30E-08		U

Notes: 1. LLDs are a-priori values.  
2. MDCs are calculated a-posteriori values.  
3. Gamma spectroscopy analysis results are calculated from a measurement using only one gamma energy line.  
4. Basis: "W" indicates results "As Received"; "D" indicates results "Dry Weight Corrected".

Qualifiers: U - Target isotope was analyzed for but not detected above the MDC and LLD.  
UI - Uncertain identification for gamma spectroscopy.  
X - Lab-specific qualifier-please see case narrative, data summary package or contact your project manager for details.  
M - Reported result is less than the LLD and greater than the MDC.

1. _____					2. _____					Method of Shipment: _____ Date Shipped: _____									
3. _____					3. _____					Airbill #: _____									
4. _____					4. _____					Airbill #: _____									
1. Chain of Custody Number: Client Determined 2. QC Codes: N = Normal Sample; TR = Trip Blank; FD = Field Duplicate; ER = Equipment Blank; MS = Matrix Spike Sample; MSD = Matrix Spike Duplicate Sample; G = Grab; C = Composite 3. Field Filtered: For liquid matrices, indicate with a "Y" for yes or sample was field filtered or "N" for sample was not field filtered 4. Matrix Codes: DW = Drinking Water; GW = Groundwater; SW = Surface Water; WW = Wastewater; ML = Mine Liquid; SO = Soil; SD = Sediment; SL = Sludge; SS = Solid Waste; OL = Oil/Pollutants; P-W = Petroleum; B = Biological 5. Sample Analysis Requested: Analytical method requested (ie. E208B, 90100, 700A) and number of preservatives provided for each (ie. 2000B - 2, 9000/700A - 1) 6. Preservative Type: BA = Hydrochloric Acid; NI = Nitric Acid; SH = Sodium Hydroxide; SA = Sulfuric Acid; AA = Acetic Acid; TR = Unknown; ST = Sodium Thiosulfate. If no preservative is added, a note must be made.										For Lab Receiving Use Only Custody Seal Intact? <u>YES</u> Cooler Temp: <u>C</u>
