NRC Issues Exemption for Work Hour Controls for Salem and Hope Creek

On January 7, the U.S. Nuclear Regulatory Commission (NRC) granted an exemption (Agencywide Document Access and Management System (ADAMS) Accession No. ML22005A323) to PSEG Nuclear LLC for its request for a temporary exemption, dated January 5 (ADAMS Accession No. ML22005A364), from specific requirements of Title 10 of the Code of *Federal Regulations* (10 CFR) Part 26, "Fitness for Duty Programs," Section 26.205, "Work hours," for Hope Creek and Salem. This exemption is related to COVID-19. The staff reviewed the proposed exemption and determined that pursuant to 10 CFR 50.26, the exemption is authorized by law, will not endanger life or property or the common defense and security, and is otherwise in the public interest.

NRC Hosts Public Meeting on Part 53 Rule Development

On January 6, the staff held a public webinar on the NRC's development of the Part 53 preliminary proposed rule language for advanced nuclear reactors (ADAMS Accession No. ML21355A270). The NRC staff and stakeholders discussed preliminary proposed rule language for Part 26, "Fitness for Duty" and potential considerations for applying existing Part 26 rule language to fatigue management programs for future Part 53 facilities. The next Part 53 public meeting is scheduled for February 8 and will be focused on interacting with non-governmental organizations and others that may have not been able to fully participate in the rulemaking interactions to date.

NRC Denies Oklo Custom Combined License Application

On January 6, the NRC staff informed Oklo Inc. of the decision to deny the custom combined license application for the Aurora micro-reactor pursuant to the requirements of 10 CFR Part 2, "Agency Rules of Practice and Procedure," Section 2.108, "Denial of application for failure to supply information," and to not accept for docketing or provide further opportunity to supplement the revised topical reports on "Maximum Credible Accident Methodology" and "Performance-Based Licensing Methodology" (ADAMS Package No. ML21307A108). The NRC staff's Notice of Denial will be published in the Federal Register the week of January 10, 2022. Within 30 days after the date of publication in the Federal Register, Oklo may demand a hearing, and any person whose interest may be affected by the proceeding may file a petition for leave to intervene. The NRC staff has ceased all review activities on the Aurora custom combined license and the associated charge numbers have been closed.

NRC Issues Final Safety Evaluation Report for North Anna Subsequent License Renewal

On January 4, the staff issued the final safety evaluation report (ADAMS Accession No. ML21354A174) for the North Anna subsequent license renewal application. The overall 18-month review schedule for the North Anna Subsequent License Renewal Application is on track. The Advisory Committee on Reactor Safeguards full committee meeting will be held in February 2022, and the final decision on the renewed license is expected in April 2022.

NRC Issues Exemption for Work Hour Controls for Turkey Point

On December 30, the NRC granted an exemption (ADAMS Accession No. ML21364A052) to Florida Power & Light Company for Turkey Point Nuclear Plant, Units 3 & 4, from specific requirements of 10 CFR Part 26, "Fitness for Duty Programs," Section 26.205, "Work hours." This exemption is related to COVID-19, partly due to the number of rising cases from omicron. The staff reviewed the proposed exemption and determined that pursuant to 10 CFR 26.9, the exemption is authorized by law, will not endanger life or property or the common defense and security, and is otherwise in the public interest.
