Christopher T. Hanson,
Chairman of the Nuclear Regulatory Commission
U.S. Nuclear Regulatory Commission
Washington, DC 20555-0001

Dear Mr. Hanson,

I am writing you as a student at West Genesee Senior High School, partaking in the Participation In Government (PIG) class. In this class, it is our job to learn about the government and what the government does. In this class, we were assigned to find something that is felt strongly about and try to make a change. I personally believe that the United States of America should use more nuclear power and less from other sources of power.

We interviewed over 300 people in our school about nuclear energy. In our research, we discovered that roughly half of the people think that we should use more nuclear energy to power our country. We have read many articles about the topic and have found lots of promising information. It mostly consisted of statements about how nuclear energy can be the cleanest and safest form of energy if done correctly. My peers and I believe that the current system is going to destroy the Earth beyond repair before our children are even born. We believe that the American government should build more nuclear power plants and fade away from using fossil fuels and other forms of energy.

What are your thoughts on this proposal? I would love to see the world, especially America stop using fossil fuels for absolutely everything. I want to make sure that this world will be as great as it is now, for my grandchildren and even future generations.

Sincerely,

A handwritten signature in black ink, appearing to read "Dylan De Sena". The signature is fluid and cursive, with the first name "Dylan" being more prominent and the last name "De Sena" following in a similar style.
