TECHNICAL SPECIFICATIONS (LDCN 21-0015)**

On September 28, 2021, and per Reference 1 included in the list of references on page 3 of this letter, Ameren Missouri submitted a license amendment request (LAR) for adopting the alternative source term methodology addressed in 10 CFR 50.67 and Regulatory Guide 1.183, Rev 0, "Alternative Radiological Source Terms for Evaluating Design Basis Accidents at Nuclear Power Reactors."

Following submittal of the LAR, the need to make corrections to the LAR, in regard to information designated as security sensitive, was identified. Also, the need to provide supplemental information was identified by the NRC staff, first in an e-mail dated November 4, 2021 (Reference 2) and then in a follow-up letter dated November 30, 2021 (Reference 3). A supplement to the Reference 1 LAR addressing these needs was submitted by letter dated December 1, 2021 (Reference 4).

This letter is submitted in order to respond to a request for additional information (RAI) electronically received (via e-mail) from the NRC on June 2, 2022 (Reference 5). Responses to the individual RAI requests/questions are hereby provided in the enclosure to this letter.

In accordance with 10 CFR 50.91, "Notice for public comment; State consultation," Section (b)(1), a copy of this supplement to the Reference 1 LAR and regulatory exemption request is being provided to the designated Missouri State official. This supplement was reviewed by the Callaway Plant Onsite Review Committee.
