Memo-to-File: Yale – New Haven Hospital

From: Jonathan Pfingsten
Senior Health Physicist
Medical and Licensing Assistance Branch
Division of Radiological Safety and Security

Date: July 06, 2022

License: 06-00819-05

Docket: 030-36413

SUBJECT: Request for early inspection of licensee

NRC License Number 06-00819-05, Yale-New Haven Hospital, authorizes the possession and use of byproduct material in a self-shielded irradiator device for irradiation of materials. The licensee was last inspected October 21, 2019. The primary program code for the licensee is a priority 5; accordingly, the next inspection's due date was initially set at October 21, 2024.

NRC Region I's Medical and Licensing Assistance (MLA) branch will be conducting an inspection of Yale-New Haven Hospital's medical broad scope license (NRC License No. 06-00819-03) the week of July 11, 2022. In accordance with IMC 2800, Materials Inspection Program, inspection intervals may be reduced to achieve efficiencies in the use of inspection resources and to reduce regulatory impact on the licensee. Per IMC 2800, if a licensee holds several licenses with different program codes that are assigned different inspection priorities, a single inspection may be scheduled whenever practicable to more efficiently use agency resources. As such, the inspection of the self-shielded irradiator and medical broad scope licenses will be conducted concurrently.
