**Subject:** Nine Mile Point Nuclear Station, Unit No. 1 - Acceptance Review Determination: Partial Adoption of TSTF-568 to Revise TS 3.3.1 for Primary Containment Oxygen Concentration [EPID: L-2022-LLA-0117]  
**Date:** Friday, September 09, 2022 12:04:57 PM

---

Mr. Reynolds,

By letter dated August 12, 2022 (ADAMS Accession No. ML22224A001), Constellation Energy Generation, LLC (CEG, the licensee) submitted a license amendment request (LAR) for Nine Mile Point Nuclear Station, Unit No. 1 (Nine Mile Point 1). The LAR proposes to modify the Applicability and Actions of Nine Mile Point 1 Technical Specification (TS) 3.3.1, "Oxygen Concentration," to adopt the inerting/de-inerting requirements of TS Task Force (TSTF) Traveler TSTF-568, Revision 2, "Revise the Applicability of BWR TS 3.6.2.5 and TS 3.6.3.2."

The purpose of this e-mail is to provide the results of the Nuclear Regulatory Commission (NRC) staff's acceptance review of this licensing action. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the submittal has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant. Consistent with Section 50.90 of Title 10 of the *Code of Federal Regulations* (10 CFR), an application for an amendment to a license (including the technical specifications) must fully describe the changes requested, and following as far as applicable, the form prescribed for original applications. Section 50.34 of 10 CFR addresses the content of technical information required. This section stipulates that the submittal address the design and operating characteristics, unusual or novel design features, and principal safety considerations.

The NRC staff has reviewed the licensee's submittal and concludes that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the request in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. You will be advised of any further information needed to support the NRC staff's detailed technical review by separate correspondence.

Based on the information provided in your submittal, the NRC staff has estimated that the review of the LAR will take approximately 120 hours to complete. The NRC staff expects to complete this review by September 9, 2023. If there are emergent complexities or challenges in our review that would cause changes to the initial forecasted completion date (greater than a month) or significant changes in the forecasted hours (greater than 25%), the reasons for the changes, along with the new estimates, will be communicated during the routine interactions with the assigned project manager. These estimates are based on the NRC staff's initial review of the application and they could change, due to several factors including requests for additional information and unanticipated addition of scope to

the review.

Please contact me if you have any questions. A copy of this e-mail will be made publicly available in ADAMS.
