Relaxation of ANP- 10300P-A L&Cs

Dan Tinkler

June 6, 2025

Content

1. Objectives
2. Background
3. L&C 11 (SL02) requirement relaxation
4. L&C 12 removal
5. L&C 18b relaxation of requirements

Objectives

- Provide an overview of the upcoming Framatome supplement to relax or remove 3 L&Cs from ANP-10300P-A
 - Provide a generic procedure to replace the plant specific requirement for SL02 in L&C 11
 - Submit a generic procedure to remove the plant specific requirement in L&C 12
 - Provide a new generic validation process to replace the requirements of L&C 18b

Background

- The original review of AURORA-B AOO contained a number of topics that were deferred to plant specific LARs
 - Primarily related to timing issues in support of a plant license amendment request for the initial transition to ATRIUM 11
 - Some items required additional lead time to fully address
 - Rather than delay the LAR, L&Cs were issued to require that the information is provided during the plant specific LAR process.

NRC's Prioritization Factors

- Reduction in resources for plant specific reviews
 - Replaces plant-specific methodologies with a single generic method
- Increase safety by improving the process
 - Replaces general acceptance criteria with a cycle-specific validation procedure for the conservative measures
