Senior Principal Technical Leader

**Annual NRC-Industry NDE Technical Information Exchange Meeting**  
Thursday, 23 January, 2025 – NRC Headquarters, Rockville, MD

# Remote Visual Inspection of Reactor Internals

# Real-Time Assistance

- Live aid to inspectors
- Reduce re-looks
- Plug-and-play setup

# Post-Inspection Analysis

- SW loads video and model results
  - Some further processing of live output
- Level II/III can review/analyze results
- Reviewer can go straight to the indications flagged by AI
  - Review and dispose of them (RI or NRI)
- Generate summary reports with screenshots
- PRE-SW: Assisted Analysis of Remote Visual Examination (AARVE) v0.1 Beta ([3002026528](#))

# Implementation Modes

	Real-Time Assistance	Post-Inspection Review
Pros	<ul style="list-style-type: none"><li>• Live aid to examiners</li><li>• Increase inspection reliability</li><li>• Reduce re-looks</li></ul>	<ul style="list-style-type: none"><li>• May significantly reduce the time required to review IVVI data</li><li>• Increase inspection reliability</li></ul>
Cons	<ul style="list-style-type: none"><li>• Potential for inspector over-dependency</li></ul>	<ul style="list-style-type: none"><li>• Does not verify correct component or examination coverage</li></ul>
Unknowns	<ul style="list-style-type: none"><li>• Schedule impact</li><li>• Ease of operability</li></ul>	<ul style="list-style-type: none"><li>• Ease of operability</li></ul>

Field Trials to Provide Insight

# Field Trial

# On Site Setup

Day 1

- Initial reluctance from inspection vendor
  - *Concern*: potential distraction to examiner
  - *Request*: set it up away from inspection personnel and first observe performance

Real-time AI results available immediately upon connection. Initial observations indicated adequate sensitivity.

- Inspection vendor moved the AI equipment into the Level III area
  - “As simple as plug’n’play”

Day 2

# Real-Time AI Performance

- Scope:
  - HD, SD; B&W, Color
  - Jet pumps, core spray, top guide, dryer
- No noticeable delay in real time AI
- Sensitivity level seen to be adequate
  - No adjustments performed
- AI flagged **ALL** previous indications without significant overcalls
  - Majority of boxes considered justifiable

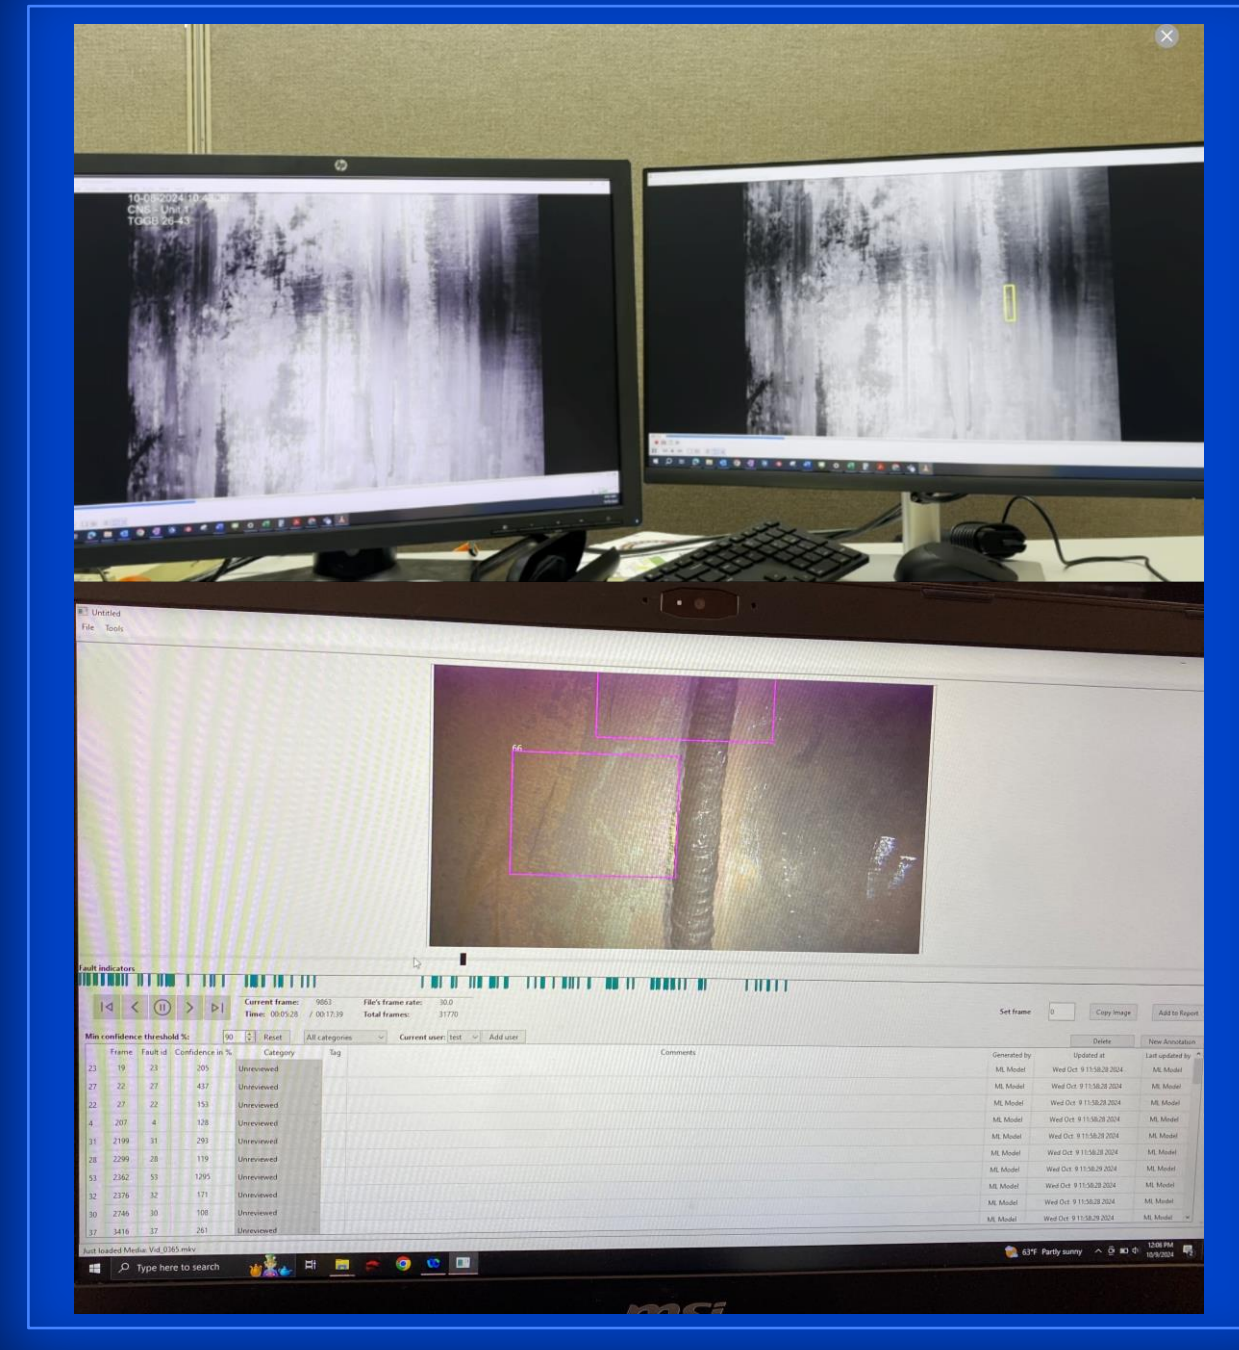

**Overall positive feedback from vendor & utility**

# Post-Inspection Review Performance

- Assessed by utility reviewer & support team
- Processing speed was slower than expected
  - On-site update to pipeline: 1.5× improvement
  - Further improvements can be made
- Observed differences between real-time and post-inspection outputs
  - Issue corrected on-site
- EPRI GUI was not effective
  - Redundancies with inspection vendor review SW
  - Videos contained too many boxes for reviewer to manually classify each one
    - Indication ID reconciliation needs improvement

**Proposed approach & solution needs work**

# Feedback, Lessons Learned & Observations

- Real-time AI can improve the quality of inspections by recommending Level IIs to provide audio to areas containing boxes
- Two monitor approach can be distracting
  - Shift to one monitor with the ability to toggle AI boxes on/off
- AI performed best where previous site data was available for training
- Continue to improve post processing speed
- Image stitching could be a valuable add on

# Next Steps

- Address lessons learned from field trial(s)
- Additional field trials
  - 2 field trials planned for Feb 2025 (US)
  - 1 field trial planned for Fall 2025 (Int'l)
- Taking volunteers for PWR field trial hosts
- Compare AI performance on “new” site before/after adding site data to training

TOGETHER...SHAPING THE FUTURE OF ENERGY®
